

PROJECT SCOPE

From this point forward, I'll treat this as if I'm your **Fractional CFO + Startup Financial Consultant** for **Leish.my** and build the model using industry-standard assumptions where details are missing.

Project Scope

Project: Leish.my Investor Financial Model v2

Objective: Produce an investor-grade financial model suitable for:

- Angel investors
 - Venture capital
 - Bank financing
 - Government grants (e.g. Cradle, MDEC, MRANTI)
 - Accelerator applications
-

Guiding Assumptions

Unless we later revise them, I'll use:

- **Business Model:** AI-enabled beauty marketplace + SaaS platform
 - **Primary Market:** Malaysia
 - **Expansion:** Singapore (Year 3), Indonesia (Year 4–5)
 - **Currency:** Malaysian Ringgit (RM)
 - **Projection Period:** 60 months
 - **Accounting Basis:** Accrual
 - **Scenario:** Base Case (with Conservative and Aggressive variants)
-

Deliverables

The completed package will include:

1. Integrated Excel financial model (60 months)
2. Assumptions workbook
3. Monthly Profit & Loss
4. Monthly Cash Flow
5. Balance Sheet
6. KPI dashboard
7. Revenue model
8. Hiring plan

9. Marketing model
 10. Cap table
 11. Valuation model
 12. Investor-ready financial summary
-

My Recommendations

To maximize investor appeal, we'll emphasize:

- **Recurring revenue** from subscriptions and SaaS.
- **Marketplace scale** through increasing booking volume.
- **Operational leverage**, where costs grow slower than revenue.
- **Clear unit economics**, including CAC, LTV, churn, and gross margin.
- **Scenario analysis** to demonstrate resilience under different growth conditions.

With that foundation, we'll have a financial model that is not only internally useful for decision-making but also credible during fundraising discussions.

Financial Model v2.0 (Investor Grade)

Excellent. I'm going to approach this the same way a Big Four financial advisory team or a VC analyst would. Rather than jumping into spreadsheets, we'll first define the financial architecture so every number is internally consistent.

LEISH.MY

Financial Model v2.0 (Investor Grade)

Executive Summary

Company

Leish.my

Industry

BeautyTech • Marketplace • SaaS • AI

Headquarters

Malaysia

Expansion

Malaysia → Singapore → Indonesia

Business Vision

Leish.my will not be valued as a booking application.

It will be valued as a **Beauty Commerce Operating System**.

Think of it as combining several business models:

- Fresha
- Booksy
- Shopify
- Canva

- Stripe
- ChatGPT

specifically for the beauty industry.

Five-Year Growth Plan

Year	Focus
2027	Build MVP and achieve product-market fit
2028	Scale across Malaysia
2029	Launch AI features and enterprise offerings
2030	Expand into Singapore
2031	Enter Indonesia and establish regional presence

Revenue Forecast (Base Case)

Year	Revenue	Growth
2027	RM1.2M	—
2028	RM3.6M	200%
2029	RM8.5M	136%
2030	RM18.4M	116%
2031	RM36.8M	100%

This assumes successful execution, increasing brand awareness, and expansion into new markets. It is an ambitious but achievable base case rather than a guaranteed outcome.

Gross Margin

Infrastructure

Estimated Company Valuation

Stage	Valuation
Pre-seed	RM3–5M
Seed	RM12–18M
Series A	RM45–70M

These valuation ranges depend on achieving the projected growth, recurring revenue, and unit economics. Actual valuation will be determined by market conditions and investor appetite.

Milestones

Year 1

- MVP launched
- 1,000 artists
- 150 studios
- Positive product-market fit signals

Year 2

- National coverage
- RM300k monthly recurring revenue
- Enterprise customers onboarded

Year 3

- AI monetization
- White-label business
- Regional launch

Year 4

- Singapore operations
- Strong enterprise pipeline

Year 5

- Indonesia expansion
 - Regional platform with diversified revenue
-

What we'll build next

The next deliverable is the **integrated 60-month financial workbook**, including:

- Monthly user acquisition model
- Revenue build-up by stream
- Cost of sales
- Operating expenses
- Hiring schedule
- Monthly Profit & Loss
- Monthly Cash Flow
- Balance Sheet
- KPI dashboard
- Break-even analysis
- Valuation and funding scenarios

The goal is to create a model where every financial statement is linked, assumptions are editable, and the outputs are suitable for investor due diligence.

SHEET 1 — Assumptions

Excellent. Now we move into what investors actually spend most of their time reviewing: **the assumptions model**.

A strong financial model is **90% assumptions and 10% formulas**. If the assumptions are sound, the projections become credible.

LEISH.MY Financial Model v2

Sheet 1 — Assumptions

Company Information

Item	Value
Company	Leish.my
Industry	Beauty Marketplace + SaaS

CAC Payback	<12 months

CFO Review & Recommendations

Before we begin building the monthly financial statements, I would recommend revisiting several assumptions as we validate the business:

1. **Customer acquisition costs (CAC)** should be tracked by marketing channel because Meta, TikTok, SEO, referrals, and partnerships will likely have very different economics.
2. **Commission rates** may differ by service category or promotional campaigns, so model flexibility is important.
3. **Churn** is one of the biggest value drivers. Even reducing monthly artist churn from 3% to 2% can have a meaningful impact on lifetime value and recurring revenue.
4. **Revenue concentration** should be monitored. A balanced mix of subscriptions, marketplace commissions, AI services, and commerce is generally more resilient than relying heavily on one source.

Next Deliverable

The next stage is the **60-month user acquisition engine**, where we'll forecast month-by-month growth for:

- Website visitors
- App installs
- Registered clients
- Artists
- Studios
- Monthly active users
- Premium subscription conversions
- Booking volume
- Gross Merchandise Value (GMV)

This becomes the foundation that drives every revenue and cash flow calculation in the model.

SHEET 2 — USER ACQUISITION ENGINE (60 MONTHS)

Excellent. This is where we stop guessing and start building a financial model the way venture capital firms do.

LEISH.MY FINANCIAL MODEL V2

SHEET 2 — USER ACQUISITION ENGINE (60 MONTHS)

This sheet drives **every other sheet** in the model.

Everything starts here.

Step 1 — Monthly Marketing Budget

Month	Budget (RM)
Jan	15,000

Jun	42
Jul	55
Aug	70
Sep	90
Oct	115
Nov	140
Dec	170

Key Insight

Many startup founders make the mistake of projecting revenue first. Investor-grade models work the other way around:

Marketing Spend → Visitors → Registrations → Active Users → Bookings → GMV → Revenue → Profit

This approach makes your assumptions transparent and much easier to defend during due diligence.

CFO Observations

Before we move on, there are three areas I'd recommend improving over time:

- **Segment acquisition channels** (paid ads, SEO, referrals, partnerships) so each has its own conversion and cost profile.
- **Track cohorts** of users by signup month to model retention and lifetime value more accurately.
- **Forecast seasonality** (for example, higher booking demand around festive periods or wedding seasons) rather than assuming smooth growth every month.

Next Sheet

We'll build the **Revenue Engine**, where we convert these users and bookings into monthly revenue across:

1. Artist subscriptions
2. Studio subscriptions
3. Marketplace commissions
4. AI subscriptions
5. Featured listings
6. Advertising
7. White-label SaaS
8. Affiliate income
9. Product marketplace commissions
10. Payment processing revenue

This is where the business transitions from user growth to monetization.

SHEET 3 — REVENUE ENGINE

Excellent. This is the sheet that investors usually spend the most time reviewing because it explains **exactly where every Ringgit comes from**.

One thing I am going to improve over a typical startup model is to **avoid optimistic assumptions**. Rather than assuming every user pays immediately, we'll use realistic conversion rates and adoption curves.

LEISH.MY FINANCIAL MODEL V2

SHEET 3 — REVENUE ENGINE

Revenue Architecture

Instead of relying on one income source, Leish.my will have **10 revenue streams**.

Revenue Stream	Business Model	Recurring	Margin
Artist Pro	SaaS	✓	92%
Studio Pro	SaaS	✓	90%
Booking Commission	Marketplace	✗	80%

-----	-------	-----	----------

Year 1 Total ≈ RM62,700

Revenue Stream 2 – Studio Subscription

Pricing

Plan	Monthly
Starter	RM149
Business	RM299
Enterprise	RM699

Assume an average monthly revenue per paying studio of **RM239**.

Month	Studios	Revenue
Jan	10	RM2,390
Feb	14	RM3,346
Mar	18	RM4,302
Apr	24	RM5,736
May	32	RM7,648
Jun	42	RM10,038
Jul	55	RM13,145
Aug	70	RM16,730
Sep	90	RM21,510
Oct	115	RM27,485
Nov	140	RM33,460
Dec	170	RM40,630

Year 1 Total ≈ RM186,400

Revenue Stream 3 – Booking Commission

From the acquisition model:

- Year 1 GMV ≈ **RM1.27M**
- Platform commission = **10%**

Year 1 Revenue ≈ RM127,000

Revenue Stream 4 – Featured Listings

Assumptions:

- 10% of artists purchase featured placement.
- Fee: RM300/month.

Month	Paying Artists	Revenue
Jan	5	RM1,500
Jun	25	RM7,500
Dec	110	RM33,000

Year 1 Total ≈ RM160,000

Revenue Stream 5 – AI Assistant

AI tools become available from Month 7.

Plans:

- AI Portfolio
- AI Caption Generator
- AI Business Assistant

Price: **RM29/month**

Adoption:

- 15% of paid artists by Year 1 end.

Estimated Year 1 Revenue:

≈ RM22,000

Revenue Stream 6 – White-Label SaaS

Target customers:

- Salon chains
- Beauty academies
- Franchise groups

Pricing:

Item	Fee
Setup	RM8,000
Monthly	RM800

Year 1 assumption:

- 5 implementations
- Recurring support from launch

Estimated Year 1 Revenue:

≈ RM60,000

Revenue Stream 7 – Advertising

Potential advertisers:

- Cosmetics brands
- Haircare companies
- Beauty schools
- Event organizers

Pricing:

- Banner placements

- Sponsored campaigns

Estimated Year 1 Revenue:

RM48,000

Revenue Stream 8 – Product Marketplace

Launch in Month 10.

Products include:

- Makeup
- Skincare
- Salon equipment
- Beauty tools

Assumptions:

- Commission rate: 12%
- Gross Merchandise Value: RM500,000 (Year 1)

Estimated Revenue:

RM60,000

Revenue Stream 9 – Payment Processing

Average payment fee retained by Leish.my:

0.5% of GMV after gateway costs.

Estimated Year 1 Revenue:

≈ RM6,350

Year 1 Revenue Summary

Revenue Stream	Revenue (RM)	Share
----------------	--------------	-------

Artist SaaS	62,700	8%
Studio SaaS	186,400	25%
Booking Commission	127,000	17%
Featured Listings	160,000	22%
AI Services	22,000	3%
White Label	60,000	8%
Advertising	48,000	6%
Product Marketplace	60,000	8%
Payment Margin	6,350	1%

Estimated Year 1 Total Revenue: RM732,450

Revenue Mix Target by Year 5

Rather than relying on booking commissions, the business should gradually shift toward recurring revenue:

Revenue Source	Year 1	Year 5 Target
SaaS	34%	50%
Marketplace	17%	25%
AI	3%	12%
White-Label	8%	8%
Commerce	8%	10%
Advertising & Payments	30%	5%

This evolution generally improves predictability and valuation because recurring subscription income tends to command higher valuation multiples than transaction-based revenue.

CFO Review

Before moving on, I'd flag two priorities:

1. **Increase subscription revenue.** Investors typically place more value on predictable recurring revenue than on commission income. A long-term target of at least 50% recurring revenue would strengthen the investment story.
2. **Validate pricing early.** The assumptions for Pro plans, featured listings, and AI tools should be tested with real users during the MVP stage. If customers accept higher pricing or higher conversion rates, the financial model can be updated accordingly.

Next Sheet

The next section is **Cost of Revenue (COGS)**, where we'll calculate:

- Payment gateway fees
- Cloud hosting
- AI API costs
- Storage
- CDN
- Customer support costs
- SMS/WhatsApp notifications
- Refunds and chargebacks

This will allow us to calculate **gross profit** and **gross margin**, two of the first metrics investors look for when assessing scalability.

SHEET 4 — COST OF REVENUE (COGS)

Excellent. This is where the model becomes **investor-grade**.

Many founders lump all expenses together. Investors don't.

They first ask:

"How much does it cost to deliver your service?"

That is **Cost of Goods Sold (COGS)**.

Everything else is **Operating Expenses (OPEX)**.

This distinction directly impacts your **Gross Margin**, one of the most important SaaS metrics.

LEISH.MY FINANCIAL MODEL V2

SHEET 4 — COST OF REVENUE (COGS)

Revenue Flow

Cost Category 1 — Payment Processing

Every online payment incurs gateway charges.

Assumptions:

Item	Value
Average Gateway Fee	2.0%
Average Booking Value	RM180
Platform Commission	10%
Gateway Provider	ToyyibPay / Stripe / FPX

Formula

Payment Fee

=

Total GMV × 2%

Year 1

GMV

RM1,272,000

Payment Fee

RM25,440

Cost Category 2 — Cloud Infrastructure

As usage grows, infrastructure costs scale.

Service	Monthly
Cloud Servers	RM1,500

------	-----

2028	80%
------	-----

2029	82%
------	-----

2030 84%

2031 85%

The expectation is that automation, improved infrastructure efficiency, and higher SaaS revenue increase margins over time.

Investor Benchmark

Company Type	Typical Gross Margin
Traditional Marketplace	35–50%
SaaS	75–90%
AI SaaS	70–88%
Beauty Marketplace	45–65%
Leish.my (Target)	78–85%

This places Leish.my within a range that is attractive for a software-enabled marketplace, assuming execution matches the projections.

CFO Recommendations

If I were presenting this model to investors, my priorities would be:

1. Protect Gross Margin

Avoid excessive discounts and keep variable costs tightly linked to usage.

2. Control AI Costs

Implement rate limits, premium AI tiers, or usage quotas so API expenses scale with revenue.

3. Optimize Infrastructure

Use auto-scaling and monitor cloud spending monthly to avoid overprovisioning.

4. Reduce Payment Costs

As transaction volume grows, negotiate lower gateway fees. Even a reduction from 2.0% to 1.6% can materially improve gross profit.

Current Financial Snapshot

Metric	Year 1
Revenue	RM732,450
COGS	RM159,696
Gross Profit	RM572,754
Gross Margin	78.2%

This establishes a solid foundation for the next stage of the model.

Next Sheet

We'll build **Operating Expenses (OPEX)**, which will include:

- Executive and employee salaries
- Marketing and sales
- Office and administration
- Software subscriptions
- Legal and accounting
- Insurance
- Travel
- Research & Development
- General & Administrative (G&A)

Once OPEX is complete, we'll have enough information to produce the first full **monthly Profit & Loss statement**, followed by cash flow and runway analysis.

SHEET 5 — OPERATING EXPENSES (OPEX)

Excellent. Now we're building the sheet that usually determines whether a startup survives its first three years.

Investors generally don't reject startups because of low revenue—they reject them because they **burn cash too quickly**. This sheet is about demonstrating disciplined spending.

LEISH.MY FINANCIAL MODEL V2

SHEET 5 — OPERATING EXPENSES (OPEX)

OPEX Structure

We separate expenses into six categories:

Payroll
Sales & Marketing
Technology & Product
General & Administrative
Facilities
Professional Services

1. Payroll

For an early-stage startup, I recommend keeping the team lean.

Year 1

Position	Headcount	Monthly (RM)	Annual (RM)
CEO / Founder	1	8,000	96,000
CTO	1	12,000	144,000
Full Stack Developer	2	8,000	192,000
UI/UX Designer	1	5,500	66,000

Marketing Executive	1	5,500	66,000
Customer Success	2	3,500	84,000
Finance & Admin	1	4,500	54,000

Total Payroll = RM702,000/year

Hiring Timeline

Month	New Hire
Jan	CTO
Feb	Developer #1
Mar	UI/UX
Apr	Marketing
Jun	Customer Success #1
Aug	Developer #2
Oct	Finance/Admin
Nov	Customer Success #2

This spreads payroll increases rather than hiring everyone on day one, improving cash efficiency.

2. Sales & Marketing

Digital Advertising

Channel	Monthly (RM)
Meta	12,000
Google	8,000
TikTok	6,000

LinkedIn	2,000
SEO & Content	4,000
Influencers	6,000

Annual = RM456,000

Offline Marketing

Item	Annual (RM)
Beauty Expo Booths	35,000
University Roadshows	18,000
Photography	10,000
Printing & Collateral	8,000

Annual = RM71,000

3. Technology & Product

Item	Annual (RM)
Software Licenses	30,000
Design Tools	8,000
QA & Testing	12,000
Development Devices	25,000
Domain & SSL	3,000
Security & Backups	18,000

Annual = RM96,000

4. Office & Administration

Item	Annual (RM)
Rent	48,000
Utilities	18,000
Internet	6,000
Furniture	20,000
Cleaning	6,000
Pantry	12,000

Annual = RM110,000

5. Professional Services

Item	Annual (RM)
Accounting	24,000
Legal	36,000
Audit	15,000
Trademark & IP	12,000
Compliance	10,000

Annual = RM97,000

6. Insurance

Item	Annual (RM)
Directors & Officers	18,000
Cyber Insurance	12,000
Office Insurance	6,000

Annual = RM36,000

7. Travel

Item	Annual (RM)
Client Meetings	15,000
Investor Meetings	10,000
Conferences	20,000

Annual = RM45,000

8. Research & Development

Item	Annual (RM)
AI Prototyping	60,000
Product Experiments	30,000
User Research	20,000

Annual = RM110,000

Year 1 Operating Expenses Summary

Category	Annual (RM)
Payroll	702,000
Sales & Marketing	527,000
Technology & Product	96,000
Office & Admin	110,000
Professional Services	97,000
Insurance	36,000

Travel	45,000
R&D	110,000

Total OPEX

RM1,723,000

Reality Check

Our current model shows:

Item	RM
Revenue	732,450
Gross Profit	572,754
Operating Expenses	1,723,000
Operating Loss	(1,150,246)

At first glance, this looks concerning—but for a venture-backed startup in its first year, it isn't unusual. The key question is whether the burn is **intentional and financed**, or whether it reflects an inefficient business.

CFO Recommendation: Lean Launch Scenario

For Leish.my, I would **not** spend RM1.7 million in Year 1.

Instead, I recommend a staged hiring and marketing plan.

Category	Original	Lean Year 1
Payroll	702k	360k
Marketing	527k	180k
Office	110k	24k
Travel	45k	8k
R&D	110k	40k

Professional Services	97k	45k
Technology	96k	60k
Insurance	36k	18k

Lean OPEX ≈ RM735,000

With this approach:

Metric	Amount
Gross Profit	RM572,754
Lean OPEX	RM735,000
Operating Loss	(RM162,246)

This is a much more manageable position for a pre-seed company raising RM500k–RM1M, provided there is a clear plan to reach stronger recurring revenue before scaling the team.

My Recommendation Before Proceeding

Rather than building the model around "spend first, grow later," I recommend we optimize it around **capital efficiency**. That means:

- Hiring only when key milestones are reached.
- Increasing marketing spend only after CAC and conversion rates are validated.
- Keeping fixed costs low until product-market fit is established.
- Using contractors and automation where possible instead of full-time hires.

This gives Leish.my a longer runway and a stronger story during fundraising.

Next Sheet

We'll build the **60-month integrated Profit & Loss statement**, combining:

- User growth
- Revenue
- COGS
- Operating expenses
- EBITDA
- Taxes
- Net profit

This becomes the core financial statement that feeds the cash flow, balance sheet, and investor dashboard.

Sheet 6 – Integrated Profit & Loss (60 Months)

Excellent.

We're now building what investors usually look at **before almost anything else**.

If this sheet makes sense, they'll continue reading.

If it doesn't...

...the meeting usually ends there.

This is the heart of the financial model.

LEISH.MY

Sheet 6 – Integrated Profit & Loss (60 Months)

This sheet links everything we've built:

Marketing

User Growth

Bookings

Revenue

COGS

Gross Profit

OPEX

EBITDA

Depreciation

EBIT

Tax

Net Profit

Year 1 Monthly P&L

Q1

Item	Jan	Feb	Mar
Revenue	18,500	24,300	31,800
COGS	4,300	5,500	7,200
Gross Profit	14,200	18,800	24,600
Payroll	22,000	30,000	35,500
Marketing	15,000	18,000	20,000
Technology	5,000	5,000	5,000
G&A	3,000	3,000	3,000
EBITDA	(30,800)	(37,200)	(38,900)

This reflects the investment phase before meaningful recurring revenue has built up.

Q2

Item	Apr	May	Jun
Revenue	41,000	53,000	68,000
COGS	9,000	11,500	15,000
Gross Profit	32,000	41,500	53,000
Payroll	41,000	41,000	44,500
Marketing	22,000	25,000	28,000
Technology	5,000	5,000	5,500
G&A	3,500	3,500	4,000
EBITDA	(39,500)	(33,000)	(29,000)

Losses narrow as revenue grows.

Q3

Item	Jul	Aug	Sep
Revenue	85,000	104,000	126,000
COGS	19,000	23,000	28,000
Gross Profit	66,000	81,000	98,000
Payroll	52,500	60,500	60,500
Marketing	30,000	33,000	36,000
Technology	6,000	6,000	6,500
G&A	4,000	4,000	4,500
EBITDA	(26,500)	(22,500)	(9,500)

Q4

Item	Oct	Nov	Dec
Revenue	151,000	181,000	220,000
COGS	33,000	40,000	48,000
Gross Profit	118,000	141,000	172,000
Payroll	65,000	68,500	68,500
Marketing	40,000	45,000	50,000
Technology	7,000	7,000	8,000
G&A	5,000	5,000	5,500
EBITDA	1,000	15,500	40,000

Monthly break-even is reached in October under this base-case model.

Year 1 Summary

Item	RM
Revenue	1,103,600
COGS	243,500
Gross Profit	860,100
Gross Margin	77.9%
Payroll	589,000
Marketing	362,000
Technology	71,000
G&A	48,000
EBITDA	(209,900)

This loss is consistent with a startup investing in product and growth during its first year.

Five-Year Profit Projection (Base Case)

Year	Revenue	EBITDA	EBITDA Margin	Net Profit
2027	1.10M	(0.21M)	-19%	(0.23M)
2028	3.40M	0.48M	14%	0.36M
2029	8.20M	2.10M	26%	1.63M
2030	17.90M	5.90M	33%	4.55M
2031	35.60M	13.60M	38%	10.40M

These figures assume the company executes its strategy successfully, achieves strong subscription growth, and maintains disciplined cost control.

Investor KPIs

KPI	Year 1	Year 3	Year 5
Gross Margin	78%	82%	85%
EBITDA Margin	-19%	26%	38%
Net Margin	-21%	20%	29%
Monthly Break-even	Oct	—	—
Annual Break-even	Year 2	—	—

Sensitivity Analysis

The financial model should also test different outcomes:

Scenario	Revenue	EBITDA
Conservative	RM28M	RM8M
Base	RM35.6M	RM13.6M
Aggressive	RM47M	RM20M

This allows investors to understand how the business performs under different market conditions.

CFO Review

Overall, this P&L tells a coherent story:

- **Year 1** is about building the platform and validating the business model.
- **Year 2** is about reaching sustained profitability.
- **Years 3–5** focus on scaling subscriptions, AI services, and enterprise offerings while expanding regionally.

The key risks to monitor are customer acquisition cost, subscription conversion, and churn. If those metrics are materially worse than assumed, profitability will be delayed. Conversely, improving recurring revenue or reducing churn can significantly accelerate EBITDA growth.

Next Sheet

The next step is the **Cash Flow Statement**, which answers questions investors care deeply about:

- How much cash is required before the business becomes self-sustaining?
- When is additional funding needed?
- What is the monthly burn rate?
- How many months of runway does each funding round provide?

This is the statement that determines whether Leish.my has enough capital to execute its growth plan.

SHEET 7 – CASH FLOW (60 Months)

Perfect.

This is the sheet that most founders underestimate.

Investors don't invest in companies that become profitable on paper.

They invest in companies that **don't run out of cash**.

Many startups with excellent P&L statements still fail because cash arrives later than expenses.

LEISH.MY FINANCIAL MODEL V2

SHEET 7 – CASH FLOW (60 Months)

This is the most important financial statement for a startup.

Unlike the P&L, it tracks **actual cash movement**.

Cash Flow Structure

Opening Cash

+

Investor Funding

+

Customer Receipts

-

QA

Capital Expenditure (CapEx)

Item	Year 1
Laptops	RM35,000
Office Setup	RM30,000
Networking	RM10,000
Servers	RM15,000

Total

RM90,000

Monthly Cash Flow

Quarter 1

Item	Jan	Feb	Mar
Opening Cash	600,000	555,000	505,000
Revenue Received	15,000	20,000	28,000
Payroll	(22,000)	(30,000)	(35,500)
Marketing	(15,000)	(18,000)	(20,000)
Other OPEX	(18,000)	(22,000)	(25,000)
CapEx	(5,000)	(0)	(10,000)
Closing Cash	555,000	505,000	442,500

Quarter 2

Item	Apr	May	Jun
Opening Cash	442,500	375,000	320,000

Revenue	40,000	52,000	66,000
Expenses	(107,500)	(107,000)	(112,000)
Closing Cash	375,000	320,000	274,000

Quarter 3

Item	Jul	Aug	Sep
Opening Cash	274,000	226,000	185,000
Revenue	84,000	103,000	125,000
Expenses	(132,000)	(144,000)	(149,000)
Closing Cash	226,000	185,000	161,000

Quarter 4

Item	Oct	Nov	Dec
Opening Cash	161,000	173,000	205,000
Revenue	151,000	181,000	220,000
Expenses	(139,000)	(149,000)	(160,000)
Closing Cash	173,000	205,000	265,000

Notice that cash begins increasing again in Q4 as monthly operations approach positive cash flow.

Cash Position by Year

Year	Closing Cash
2027	RM265,000
2028	RM1.70M

2029 RM5.90M
2030 RM15.20M
2031 RM34.60M

These balances assume planned fundraising is completed and growth follows the base case.

Burn Rate

Monthly burn is highest in the first half of Year 1.

Quarter	Monthly Burn
Q1	RM52k
Q2	RM56k
Q3	RM45k
Q4	Positive

Runway

Starting cash

RM600,000

Average Burn

RM50,000/month

Runway

≈ 12 months

Recommended Raise

Although RM500k can fund an MVP, it leaves limited room for delays.

Round	Recommendation
Pre-Seed	RM1.2M
Seed	RM3M
Series A	RM12M

This provides more flexibility if customer acquisition is slower than expected or product development takes longer.

Funding Utilization

Pre-Seed RM1.2M

Category	Amount
Product Development	RM420k
Payroll	RM300k
Marketing	RM240k
Cloud & AI	RM90k
Legal & Operations	RM90k
Contingency	RM60k

Investor View

A typical investor reviewing this sheet will focus on:

- How quickly cash declines in the first year.
- Whether the company reaches positive operating cash flow before needing another raise.
- Whether fundraising milestones align with product and revenue milestones.
- Whether management has enough contingency for execution risk.

CFO Recommendation

I would strengthen this model further by:

1. **Including a minimum cash policy** (for example, never allowing projected cash to fall below three months of operating expenses).
 2. **Adding a downside case** where user growth is 30–40% slower, to show how much additional funding would be required.
 3. **Linking fundraising to milestones**, such as monthly recurring revenue or active users, rather than fixed calendar dates. This gives investors confidence that capital deployment is disciplined.
-

Current Model Status

We have now completed:

-  Assumptions
-  User Acquisition Engine
-  Revenue Engine
-  Cost of Revenue (COGS)
-  Operating Expenses
-  Profit & Loss
-  Cash Flow

The remaining major components are:

1. **Balance Sheet**
2. **SaaS KPI Dashboard**
3. **Cap Table & Dilution**
4. **Valuation Model**
5. **Sensitivity Analysis**
6. **Investor Dashboard**
7. **Final integrated Excel workbook**

At this stage, the model has evolved from a simple revenue forecast into a structured financial plan that can support strategic decisions and investor discussions.

Sheet 8 – Balance Sheet (60 Months)

Excellent.

This is where your financial model starts looking like one produced by **Deloitte, PwC, EY, or KPMG**.

Many startup founders completely ignore the Balance Sheet.

VCs don't.

Banks definitely don't.

This sheet tells investors one thing:

Is Leish.my becoming a stronger company every year?

LEISH.MY

Sheet 8 – Balance Sheet (60 Months)

Unlike the P&L,

the Balance Sheet is a snapshot.

It answers one question:

What does the company own?

vs

What does the company owe?

Balance Sheet Formula

$$\text{Assets} = \text{Liabilities} + \text{Equity}$$

Every transaction in your model must satisfy this equation.

Assets

Current Assets

Cash

Accounts Receivable

Prepaid Expenses

Security Deposits

Cash

Comes directly from the Cash Flow Statement.

Year	Cash
2027	RM265,000
2028	RM1,700,000
2029	RM5,900,000
2030	RM15,200,000
2031	RM34,600,000

Accounts Receivable

Although most marketplace transactions settle quickly, enterprise customers and white-label contracts may pay on 30-day terms.

Assumption

30 days outstanding

Year	AR
2027	RM45,000
2028	RM140,000
2029	RM310,000

2030 RM640,000

2031 RM1,180,000

Prepaid Expenses

Insurance

Annual software

Cloud credits

Year	Value
2027	RM18,000
2028	RM24,000
2029	RM32,000
2030	RM44,000
2031	RM60,000

Non-Current Assets

Equipment

MacBooks

Developer PCs

Networking

Office Equipment

Purchased via CapEx.

Depreciation

3 years straight-line.

Year	Net Value
2027	RM70,000
2028	RM110,000
2029	RM135,000
2030	RM150,000
2031	RM160,000

Intangible Assets

This is important.

Leish.my owns:

Software

AI Models

Algorithms

Brand

Domain

Mobile Apps

Databases

These are valuable assets.

Capitalized Development

Year	Value
2027	RM350,000
2028	RM900,000
2029	RM1.8M
2030	RM3.2M
2031	RM5.4M

Note: In practice, whether development costs are capitalized depends on the applicable accounting standards and whether the costs meet capitalization criteria. Early-stage startups often expense a significant portion of development until technical feasibility is established.

Total Assets

Year	Assets
2027	RM748,000
2028	RM2.87M
2029	RM8.18M
2030	RM19.23M
2031	RM41.40M

Liabilities

Accounts Payable

Cloud

Marketing

Contractors

Year	AP
2027	RM35,000
2028	RM90,000
2029	RM180,000
2030	RM340,000
2031	RM590,000

Taxes Payable

Corporate Tax

Year	Tax
2027	RM0
2028	RM86,000
2029	RM391,000
2030	RM1.09M
2031	RM2.49M

Deferred Revenue

Subscriptions paid in advance.

This is actually good.

Investors love it.

Customers pay first.

You deliver later.

Year	Deferred Revenue
2027	RM62,000
2028	RM170,000
2029	RM360,000
2030	RM740,000
2031	RM1.42M

Total Liabilities

Year	Liabilities
------	-------------

2027	RM97,000
2028	RM346,000
2029	RM931,000
2030	RM2.17M
2031	RM4.50M

Equity

Consists of:

Founder Capital

Investor Capital

Retained Earnings

Founder Capital

RM100,000

Investment

Round	Amount
Pre-Seed	RM1.2M
Seed	RM3M
Series A	RM12M

Retained Earnings

Calculated from cumulative profits and losses.

Year	Retained Earnings
2027	(RM230,000)
2028	RM130,000
2029	RM1.76M
2030	RM6.31M
2031	RM16.71M

Total Equity

Year	Equity
2027	RM651,000
2028	RM2.52M
2029	RM7.25M
2030	RM17.06M
2031	RM36.90M

Balance Check

Year	Assets	Liabilities	Equity
2027	RM748k	RM97k	RM651k
2028	RM2.87M	RM346k	RM2.52M
2029	RM8.18M	RM931k	RM7.25M
2030	RM19.23M	RM2.17M	RM17.06M
2031	RM41.40M	RM4.50M	RM36.90M

Every year:

Assets = Liabilities + Equity

Investor Health Indicators

Metric	Year 1	Year 5
Current Ratio	5.4	8.1
Debt-to-Equity	0.15	0.12
Cash Ratio	2.7	6.9
Working Capital	Positive	Strong

These ratios suggest a business with a healthy liquidity position under the assumptions used in this model.

CFO Review

From a financial governance perspective, this is the type of balance sheet investors like to see:

- **Growing cash reserves** instead of repeated emergency fundraising.
- **Low leverage**, reducing financial risk.
- **Increasing retained earnings**, showing that profitability eventually funds future growth.
- **Deferred revenue**, indicating strong subscription adoption and cash collected in advance.

One point I'd monitor carefully is the treatment of **capitalized software development**. During due diligence, investors and auditors will examine whether those costs meet accounting standards, so the model should be flexible enough to expense or capitalize development as needed.

Model Progress

We have now completed approximately **80%** of the investor-grade financial model:

-  Assumptions
-  User Acquisition Engine
-  Revenue Engine
-  COGS
-  Operating Expenses

-  Profit & Loss
-  Cash Flow
-  Balance Sheet

Next Sheet

We'll build the **SaaS & Marketplace KPI Dashboard**, covering:

- Monthly Recurring Revenue (MRR)
- Annual Recurring Revenue (ARR)
- Gross Merchandise Value (GMV)
- Customer Acquisition Cost (CAC)
- Customer Lifetime Value (LTV)
- LTV:CAC ratio
- Churn
- Net Revenue Retention (NRR)
- Burn Multiple
- Magic Number
- Rule of 40
- CAC Payback Period

This dashboard is typically one of the first pages investors review because it summarizes the health and scalability of the business beyond the financial statements.

SHEET 9 — SaaS & Marketplace KPI Dashboard

Excellent.

This is the sheet that separates a **good startup** from a **venture-scale startup**.

Most founders show revenue.

Professional investors ignore revenue first.

They look at **KPIs**.

Because KPIs tell them whether revenue is **repeatable**.

LEISH.MY

SHEET 9 — SaaS & Marketplace KPI Dashboard

This sheet is what I would personally open first if I were evaluating Leish.my for investment.

KPI Categories

We'll group metrics into six dashboards:

Growth

Revenue

Customer

Marketplace

Finance

Investment

1. Growth Dashboard

Registered Users

Year	Clients	Artists	Studios	Total Accounts
2027	20,000	1,000	150	21,150
2028	60,000	3,000	500	63,500
2029	150,000	7,000	1,200	158,200
2030	320,000	15,000	2,500	337,500
2031	650,000	30,000	5,000	685,000

Monthly Active Users (MAU)

Target

40%

Year	MAU
2027	8,460
2028	25,400
2029	63,280
2030	135,000
2031	274,000

DAU / MAU Ratio

Healthy apps

20–30%

Target

28%

This indicates users return frequently rather than only occasionally.

2. Revenue Dashboard

Monthly Recurring Revenue (MRR)

Year	MRR
2027	RM62,000
2028	RM215,000
2029	RM610,000
2030	RM1.45M
2031	RM3.10M

Annual Recurring Revenue (ARR)

Formula

$$\text{ARR} = \text{MRR} \times 12$$

Year	ARR
2027	RM744k
2028	RM2.58M
2029	RM7.32M
2030	RM17.4M
2031	RM37.2M

Revenue Per User (ARPU)

Formula

$$\frac{\text{Revenue}}{\text{Active Users}}$$

Year	ARPU
2027	RM130
2028	RM142
2029	RM150
2030	RM161
2031	RM171

Steady ARPU growth reflects additional monetization through AI, enterprise plans, and commerce.

3. Customer Dashboard

Customer Acquisition Cost (CAC)

Target

Segment	CAC
Client	RM30
Artist	RM75
Studio	RM350

Weighted Average

RM42

Customer Lifetime Value (LTV)

Formula

Average Revenue

×

Gross Margin

×

Lifetime

Segment	LTV
Client	RM420
Artist	RM1,900
Studio	RM8,500

LTV:CAC Ratio

Segment	Ratio
Client	14:1
Artist	25:1
Studio	24:1

CFO Observation

These ratios are intentionally optimistic. In practice, I'd want to validate them with real data after launch. Many investors consider **3:1 or higher** healthy, so if Leish.my achieves even half of these values, the economics remain attractive.

4. Marketplace Dashboard

GMV

Year	GMV
2027	RM1.3M

2028	RM5.2M
2029	RM13.4M
2030	RM28M
2031	RM56M

Take Rate

Platform Commission

10%

Target

12%

Average Booking Value

RM180

Target

RM220

Monthly Bookings

Year	Bookings
------	----------

2027	7,100
------	-------

2028	29,000
------	--------

2029	74,000
------	--------

2030	155,000
------	---------

2031	310,000
------	---------

5. Financial Dashboard

Gross Margin

Target

80%

EBITDA Margin

Year	Margin
2027	-19%
2028	14%
2029	26%
2030	33%
2031	38%

Burn Multiple

Formula

Net Burn

÷

Net New ARR

Target

Less than **1.5**

Runway

Target

18–24 months

Cash Conversion Cycle

Target

Negative

This means customers pay before most suppliers need to be paid, improving cash efficiency.

6. Investor Dashboard

Rule of 40

Formula

Revenue Growth %

+

EBITDA Margin %

Example (2029)

Growth

136%

EBITDA

26%

Score

162%

Anything above **40%** is generally viewed positively for software businesses, although very high values in early years usually reflect rapid growth from a small revenue base.

Net Revenue Retention (NRR)

Target

115%

This indicates existing customers spend more over time through upgrades and add-on services.

Magic Number

Target

Above 0.8

Measures sales efficiency.

CAC Payback

Target

Under 12 months

Quick Ratio

Target

Above 4

Measures expansion revenue relative to churn.

Executive Dashboard (One-Page View)

KPI	2027	2028	2029	2030	2031
Revenue	RM1.10M	RM3.40M	RM8.20M	RM17.90M	RM35.60M
ARR	RM744k	RM2.58M	RM7.32M	RM17.40M	RM37.20M

GMV	RM1.30M	RM5.20M	RM13.40M	RM28.00M	RM56.00M
Gross Margin	78%	80%	82%	84%	85%
EBITDA Margin	-19%	14%	26%	33%	38%
Cash	RM265k	RM1.70M	RM5.90M	RM15.20M	RM34.60M
MAU	8,460	25,400	63,280	135,000	274,000
LTV:CAC	14:1	16:1	18:1	20:1	22:1

CFO Assessment

If Leish.my ultimately achieves metrics close to these, it would have characteristics that investors typically look for:

- A high proportion of recurring revenue.
- Strong gross margins.
- Improving EBITDA over time.
- Healthy customer economics.
- Multiple revenue streams that reduce dependence on any single business line.

The next step is to make the model even more useful for fundraising by showing **ownership, dilution, and investor returns**.

NEXT (Sheet 10)

We'll build the **Cap Table & Investment Model**, including:

- Founder ownership
- Employee Stock Option Pool (ESOP)
- Pre-seed dilution
- Seed dilution
- Series A dilution
- Post-money valuation
- Shareholder ownership after each round
- Investor return scenarios (5×, 10×, 20× exit)

This is the sheet that lets both founders and investors understand how ownership evolves as the company raises capital.

SHEET 10 — CAP TABLE & FUNDRAISING MODEL

Excellent.

This is probably the **most negotiated document** in every fundraising process.

I've seen founders lose millions because they didn't understand dilution.

We're going to build this exactly like institutional investors do.

LEISH.MY

SHEET 10 — CAP TABLE & FUNDRAISING MODEL

Philosophy

One mistake founders make is selling too much equity too early.

Example:

Founder owns

100%

After three rounds...

Founder owns

12%

Company becomes successful.

Founder regrets everything.

We are **not** doing that.

Target Ownership

After Series A

Founder should still own

55–65%

This keeps investors confident that the founding team remains strongly incentivized.

Capital Structure

Before Investment

Shareholder	Shares	%
Founder	10,000,000	100%

Simple.

Clean.

Employee Option Pool (ESOP)

Before raising money,

create an ESOP.

This avoids unnecessary dilution later.

Recommended

15%

After ESOP

Shareholder	Shares	%
-------------	--------	---

Founder	10,000,000	85%
ESOP Pool	1,764,706	15%
Total	11,764,706	100%

Pre-Seed Round

Raise

RM1.2 Million

Target Valuation

RM8 Million Pre-Money

Post-Money

RM9.2 Million

Investor Receives

≈13%

After Investment

Shareholder	%
Founder	73.9%
ESOP	13.0%
Pre-Seed Investor	13.1%

CFO Note

A valuation between RM8–10 million is achievable **if** Leish.my launches a working MVP, demonstrates early traction, and validates core unit economics. If fundraising occurs before those milestones, a lower valuation may be more realistic.

Seed Round

18 months later.

Raise

RM3 Million

Pre-money

RM22 Million

Post-money

RM25 Million

Investor

12%

After Seed

Shareholder	%
Founder	65.0%
ESOP	11.5%
Pre-Seed	11.5%
Seed	12.0%

Series A

Raise

RM12 Million

Pre-money

RM60 Million

Post-money

RM72 Million

Investor

16.7%

After Series A

Shareholder	%
Founder	54.2%
ESOP	9.6%
Pre-Seed	9.6%
Seed	10.0%
Series A	16.6%

Final Ownership

Shareholder	%
Founder	54.2%
Employees	9.6%
Investors	36.2%

This is a healthy cap table.

Ownership Timeline

100%

↓

85%

↓

74%

Dilution Calculator

The Excel model should allow you to change:

Pre-money valuation

↓

Investment

↓

Automatically updates

- Shares issued
- Founder %

- Investor %
- ESOP %
- Exit values

No manual calculation.

Everything dynamic.

Future Fundraising Capacity

Even after Series A,

Leish.my could still raise:

Series B

Series C

IPO

without founders losing control.

That is exactly what we want.

Employee ESOP Distribution

Position	Equity
CTO	3.0%
Senior Engineers	2.5%
Product	1.5%
Marketing	1.0%
Sales	0.8%
Operations	0.8%

Remaining pool reserved for future hires.

Investor Readiness Score

Category	Score
Cap Table Simplicity	10/10
Founder Incentive	10/10
ESOP Structure	9/10
Future Fundraising Flexibility	10/10
Dilution Management	9/10

Overall

9.6 / 10

CFO Recommendation (Most Important)

If I were advising Leish.my through fundraising, I would recommend **raising based on milestones rather than calendar dates**. For example:

Round	Trigger
Pre-Seed	MVP launched, 200 paying artists, 25 studios, first recurring revenue
Seed	RM250k MRR, positive unit economics, 2,000 paying professionals
Series A	RM1M+ MRR, nationwide coverage, enterprise customers, AI products generating recurring revenue

This gives investors confidence that each round funds the next stage of growth instead of simply covering ongoing losses.

Model Status

At this point, we have built approximately **95%** of the investor-grade financial model.

Completed:

- ☒ Assumptions
- ☒ User Acquisition

-  Revenue Engine
-  COGS
-  Operating Expenses
-  Profit & Loss
-  Cash Flow
-  Balance Sheet
-  KPI Dashboard
-  Cap Table

NEXT (FINAL SECTION)

The last stage is what investment banks and VC associates usually prepare for an investment committee:

Master Executive Dashboard & Valuation Model

This will combine the entire model into a single executive view with:

- CEO dashboard
- Investor dashboard
- 60-month charts
- Scenario analysis (Conservative / Base / Aggressive)
- DCF valuation
- VC valuation
- Revenue multiple valuation
- Sensitivity analysis
- IPO and acquisition scenarios
- Final investment recommendation
- Board-ready presentation summary

This becomes the first document a prospective investor reviews before opening the detailed financial workbook.

SHEET 11 — EXECUTIVE DASHBOARD & VALUATION MODEL

Excellent. This final sheet is the **investment committee dashboard**—the one-page summary that ties the entire model together.

One recommendation before we begin: for an actual fundraising process, all figures should be generated from linked formulas in Excel (not manually entered), so every assumption automatically updates the dashboard.

LEISH.MY

SHEET 11 — EXECUTIVE DASHBOARD & VALUATION MODEL

Executive Summary

Metric	Year 1	Year 3	Year 5
Revenue	RM1.10M	RM8.20M	RM35.60M
ARR	RM744k	RM7.32M	RM37.20M
GMV	RM1.30M	RM13.40M	RM56.00M
Gross Margin	78%	82%	85%
EBITDA Margin	-19%	26%	38%
Net Profit	(RM230k)	RM1.63M	RM10.40M
Cash Balance	RM265k	RM5.90M	RM34.60M
Active Users	8,460	63,280	274,000

This provides a concise snapshot of operational performance, profitability, and liquidity.

Growth Dashboard

Revenue Growth

Year	Revenue	YoY Growth
2027	RM1.10M	—
2028	RM3.40M	209%
2029	RM8.20M	141%
2030	RM17.90M	118%
2031	RM35.60M	99%

As the business matures, growth rates naturally moderate while revenue continues to expand.

User Growth

Year	Registered Users	Paying Customers
2027	21,150	495
2028	63,500	1,950
2029	158,200	5,600
2030	337,500	12,500
2031	685,000	27,000

Valuation Models

A prudent fundraising model should present multiple valuation approaches rather than relying on a single method.

1. Revenue Multiple

Assumptions:

- Year 5 Revenue: RM35.6M
- Revenue Multiple: 6×

Metric	Value
--------	-------

Enterprise Value	RM213.6M
------------------	----------

2. EBITDA Multiple

Assumptions:

- Year 5 EBITDA: RM13.6M
- EBITDA Multiple: 15×

Metric	Value
Enterprise Value	RM204.0M

3. Discounted Cash Flow (DCF)

Illustrative assumptions:

- Discount Rate (WACC): 15%
- Terminal Growth: 3%

Metric	Value
Estimated Enterprise Value	RM180–220M

Because DCF is highly sensitive to long-term assumptions, it's best used alongside market-based valuation methods.

4. Venture Capital Method

Illustrative assumptions:

- Target Exit Value: RM500M
- Required Investor Return: 10×

Metric	Value
Post-Money Valuation (Illustrative)	RM50M

This approach is commonly used for early-stage financing where long-term forecasts are uncertain.

Scenario Analysis

Metric	Conservative	Base	Aggressive
Year 5 Revenue	RM24M	RM35.6M	RM50M
Year 5 EBITDA	RM6M	RM13.6M	RM21M
Estimated Valuation	RM120M	RM210M	RM320M

Key Performance Indicators

KPI	Target	Projected
Gross Margin	>75%	85%
LTV:CAC	>3:1	14–22:1*
CAC Payback	<12 months	9 months
Monthly Churn	<3%	2.2%
NRR	>110%	115%
Rule of 40	>40	137

*These LTV:CAC values are optimistic and should be validated with actual operating data after launch.

Investment Milestones

Phase	Milestone
MVP	Platform launch, first 200 artists

Product-Market Fit	RM50k Monthly Recurring Revenue
Seed Ready	RM250k Monthly Recurring Revenue
Series A Ready	RM1M Monthly Recurring Revenue
Regional Expansion	Malaysia-wide operations with initial international growth

Key Risks

Risk	Mitigation
Slower user acquisition	Increase partnerships and referral programs
High customer acquisition cost	Improve organic channels and conversion rates
AI infrastructure costs	Tiered pricing and usage limits
Competitive pressure	Focus on ecosystem integration and community features
Funding delays	Maintain 12–18 months of runway and milestone-based hiring

Board Dashboard

A board-facing dashboard should include:

- Cash balance
- Monthly recurring revenue (MRR)
- Burn rate
- Runway
- Gross margin
- Customer acquisition cost (CAC)
- Customer lifetime value (LTV)
- Churn
- Active users
- Net promoter score (NPS)
- Top strategic risks
- Progress against quarterly objectives

This allows directors and investors to review business health at a glance.

Overall Investment Assessment

Area	Assessment
Market Opportunity	Strong
Business Model	Diversified recurring + marketplace
Gross Margin Potential	High
Capital Efficiency	Good (with lean execution)
Scalability	High
Investor Readiness	Strong after MVP validation

Recommended Next Steps

To make this truly **institutional-grade**, I recommend producing a complete financial package consisting of:

- 1. Dynamic Excel financial model**
 - 60-month integrated model
 - Fully linked formulas
 - Scenario selector (Conservative / Base / Aggressive)
 - Automated charts and dashboards
- 2. Investor-ready PowerPoint (15–20 slides)**
 - Market opportunity
 - Product
 - Business model
 - Financial highlights
 - Funding request
 - Use of funds
 - Growth roadmap
- 3. Data room package**
 - Financial assumptions
 - Cap table
 - Unit economics
 - KPI definitions
 - Risk register
 - Product roadmap
 - Customer acquisition strategy

Final CFO Assessment

Leish.my has the potential to become a scalable software-enabled marketplace if it can demonstrate:

- Consistent growth in paying artists and studios.
- Strong recurring subscription revenue.
- Sustainable customer acquisition costs.
- High customer retention.
- Disciplined capital allocation.

The financial framework we've built provides a strong starting point for planning and fundraising. Before presenting it to investors, I would recommend replacing high-level assumptions with observed operating metrics from the MVP so the model reflects real-world performance rather than purely forecasted values. This will significantly increase the credibility of the projections.

Phase 2 – Institutional Investor Package

Yes. The financial model itself is now complete.

If we were building this as an actual CFO engagement, there are **Phase 2 deliverables** that transform it from a forecast into a complete investment package.

Phase 2 – Institutional Investor Package

Module 12 — Dynamic Excel Financial Model

This is the master workbook that links everything together.

Workbook Structure

00_README

01_Assumptions

02_User_Growth

03_Revenue

04_COGS

05_OPEX

06_P&L

07_Cash_Flow

08_Balance_Sheet

09_KPI_Dashboard

10_Cap_Table

11_Valuation

12_Scenarios

13_Dashboard

14_Charts

15_Data_Validation

Features:

- Fully formula-driven
 - No hard-coded totals
 - Automatic updates
 - Scenario selector
 - Dynamic charts
 - Investor-ready formatting
-

Module 13 — 5-Year Operating Plan

This is what the management team uses internally.

Monthly Targets

For every month over 60 months:

- New users
- Active users
- Paying artists
- Paying studios
- Bookings
- GMV
- Revenue
- Payroll
- Marketing
- EBITDA
- Cash

This becomes the company's monthly execution plan.

Module 14 — Fundraising Package

Includes:

Investment Deck

15–20 slides

- Vision

- Market
 - Product
 - Competition
 - Business model
 - Financials
 - Team
 - Ask
 - Use of funds
 - Roadmap
-

Executive Summary

2 pages

Suitable for:

- Angel investors
 - VC firms
 - Family offices
-

Investment Memo

10–15 pages

Contains:

- Market analysis
 - Risks
 - Financial summary
 - Valuation
 - Unit economics
 - Due diligence checklist
-

Module 15 — Due Diligence Room

Organized folders such as:

Legal/

Financial/

Technology/

Product/

Customers/

Marketing/

HR/

IP/

Operations/

Tax/

This helps streamline investor due diligence.

Module 16 — SaaS Metrics Workbook

Tracks monthly metrics including:

- MRR
 - ARR
 - Churn
 - NRR
 - CAC
 - LTV
 - LTV:CAC
 - Burn Multiple
 - Rule of 40
 - Magic Number
 - Payback Period
 - Expansion Revenue
 - Logo Retention
 - Revenue Retention
-

Module 17 — Board Reporting Pack

A monthly board report containing:

- CEO summary
 - KPI dashboard
 - Financial statements
 - Budget vs. actual
 - Product updates
 - Sales performance
 - Hiring
 - Risks
 - Action items
-

Module 18 — Fundraising Valuation Workbook

Supports multiple valuation approaches:

- Revenue multiple
 - EBITDA multiple
 - DCF
 - VC method
 - Comparable company analysis
 - Sensitivity analysis
-

Module 19 — Investor CRM

Track:

- Investor name
 - Fund
 - Stage
 - Ticket size
 - Contact history
 - Follow-ups
 - Meeting status
 - Probability of investment
-

Module 20 — Exit Strategy Model

Illustrates potential outcomes for:

- Strategic acquisition
 - Private equity investment
 - IPO
 - Secondary share sales
-

Final Deliverables

At the end of the engagement, you would have:

Deliverable	Status
60-Month Financial Model	✓
Profit & Loss	✓
Cash Flow	✓
Balance Sheet	✓
KPI Dashboard	✓
Cap Table	✓
Valuation Model	✓
Investor Dashboard	✓
Executive Summary	Ready to prepare
Investor Pitch Deck	Ready to prepare
Excel Financial Model	Ready to build
Board Reporting Pack	Ready to prepare
Due Diligence Package	Ready to prepare

My Recommendation

Given everything we've built for **Leish.my**, the next logical step is not another planning document. It's creating the **actual deliverables**.

I recommend we produce them in this order:

1. **Investor-grade Excel financial model** (fully linked with formulas, assumptions, and dashboards).
2. **20-slide VC pitch deck** with professional design.
3. **50–80 page business plan** covering market analysis, product strategy, operations, and financials.
4. **Complete fundraising data room** with all supporting documents.
5. **Three-statement financial model (Excel) + valuation workbook** suitable for investor due diligence.

These five deliverables together form a comprehensive fundraising package rather than just a financial forecast.

Given your previous work on **Leish.my**, I would prioritize the Excel model first, because it becomes the single source of truth that feeds the pitch deck, business plan, and investor discussions.

LEISH.MY INVESTMENT PACKAGE (V1.0)

I think we've reached the point where the deliverable changes.

You've already asked me to build the business model and financial projections. The next step isn't another "sheet"—it's building the **actual investment package** that you could hand to investors.

If I were engaged as the CFO for **Leish.my**, here's exactly what I would produce.

LEISH.MY INVESTMENT PACKAGE (V1.0)

Phase 1 — Corporate Strategy (100%)

- ☒ Vision & Mission
 - ☒ Business Model Canvas
 - ☒ Lean Canvas
 - ☒ SWOT Analysis
 - ☒ Porter Five Forces
 - ☒ Go-to-Market Strategy
 - ☒ 5-Year Roadmap
-

Phase 2 — Financial Model (100%)

- ☒ Assumptions
 - ☒ User Growth
 - ☒ Revenue
 - ☒ COGS
 - ☒ OPEX
 - ☒ P&L
 - ☒ Cash Flow
 - ☒ Balance Sheet
 - ☒ KPI Dashboard
 - ☒ Cap Table
 - ☒ Valuation
-

Phase 3 — Investor Documents (Next)

1. Executive Summary (2 pages)

This is the document investors read first.

Contents:

- Problem
 - Solution
 - Market
 - Business Model
 - Traction
 - Financial Highlights
 - Funding Ask
 - Use of Funds
-

2. Investor Pitch Deck

A professional 20-slide presentation.

Slide	Title
1	Cover
2	Vision
3	Problem
4	Market Size
5	Solution
6	Product
7	Demo Screens
8	Business Model
9	Competitive Landscape
10	Go-to-Market
11	Traction

12	Financial Highlights
13	KPIs
14	Roadmap
15	Team
16	Investment Ask
17	Use of Funds
18	Exit Strategy
19	Why Invest Now
20	Thank You

3. Business Plan

A comprehensive document of approximately 60–80 pages.

Typical structure:

- Executive Summary
 - Company Overview
 - Industry Analysis
 - Customer Personas
 - Product & Technology
 - Operations
 - Marketing
 - Financial Plan
 - Risk Analysis
 - Appendices
-

4. Data Room

Organized for due diligence:

Legal/
Finance/
Technology/
Product/
Customers/
Marketing/
Operations/

HR/
IP/
Tax/

5. Product Strategy

Detailed product roadmap including:

- MVP definition
 - Version 1.0
 - Version 2.0
 - AI roadmap
 - White-label roadmap
 - API roadmap
-

6. Technical Architecture

Complete system documentation:

Flutter / React

↓

Backend API

↓

Authentication

↓

Booking Engine

↓

Payment Gateway

↓

Notification Service

↓

AI Engine

Analytics

7. Marketing Playbook

Acquisition channels:

- Meta Ads
 - Google Ads
 - TikTok
 - SEO
 - Referral Program
 - Studio Partnerships
 - Artist Ambassadors
 - Influencer Campaigns
-

8. Sales Playbook

Processes for:

- Studio acquisition
 - Enterprise sales
 - White-label sales
 - Partnerships
 - Government collaborations
-

9. Operations Manual

Standard operating procedures covering:

- Customer support
 - Onboarding
 - Verification
 - Refunds
 - Moderation
 - Incident management
-

10. Scaling Strategy

Expansion plan:

Phase 1

- Malaysia

Phase 2

- Singapore
- Brunei

Phase 3

- Indonesia

Phase 4

- Thailand
- Philippines

Phase 5

- GCC countries (targeting beauty professionals and migrant communities where relevant)

Enterprise-Grade Deliverables

If we continue all the way to completion, the package would include:

Deliverable	Approx. Size
Financial Model	~20 worksheets
Business Plan	60–80 pages
Investor Deck	20 slides
Operations Manual	80–120 pages
Product Requirements Document	100–150 pages
Technical Architecture	80–100 pages
API Documentation	80–150 pages

UI/UX Design System	150–250 screens
Market Research Report	80–120 pages
Due Diligence Package	200+ supporting files

My Recommendation

At this stage, I would stop creating hypothetical planning documents and begin producing the **real artifacts** you'll use.

The order I'd recommend is:

1. **Investor Pitch Deck** (20 slides)
2. **Excel Financial Model** (fully linked and formula-driven)
3. **Business Plan** (60–80 pages)
4. **Product Requirements Document (PRD)**
5. **Technical Architecture**
6. **UI/UX Design System**
7. **Fundraising Data Room**

This sequence ensures each document builds on the previous one and minimizes rework.

One Additional Suggestion

Since you've already invested significant effort into Leish.my, I would treat this as a real startup rather than a concept.

That means creating a professional document suite with consistent branding, financial assumptions, diagrams, and presentation quality—the kind of package you could confidently share with investors, accelerators, banks, or strategic partners.

INVESTOR PITCH DECK (V1 DRAFT)

We've essentially finished the financial system and moved into "startup operating system" territory.

So the next step is no longer *planning depth*—it's **execution artifacts investors actually use in meetings**.

I'll continue in the most useful direction:

LEISH.MY — NEXT PHASE

INVESTOR PITCH DECK (V1 DRAFT)

This is your **first real fundraising weapon**.

20-SLIDE INVESTOR DECK

1. Cover

LEISH.MY

The Operating System for Beauty & Creative Professionals

Tagline:

Book. Manage. Grow. Monetize.

2. Vision

To become the **leading digital infrastructure for beauty and creative professionals in Southeast Asia**, powering bookings, business tools, and income generation in one ecosystem.

3. Problem

Current fragmented system:

- Artists depend on WhatsApp / Instagram DM
 - Studios manage bookings manually
 - No centralized discovery system
 - High customer no-show rate
 - No business analytics
 - No monetization tools beyond bookings
-

4. Market Pain (Real Behavior)

- 70–90% bookings happen via chat apps
 - No standard pricing system
 - Lost revenue from missed bookings
 - No customer retention system
 - No scalable tools for solo artists
-

5. Market Opportunity

Beauty + services economy in SEA:

- Millions of independent artists
- Rapid creator economy growth
- High mobile-first behavior
- Under-digitized SME services sector

Total addressable: **multi-billion RM opportunity**

6. Solution

Leish.my solves this via:

- Booking system
 - Artist storefronts
 - Studio management tools
 - AI assistant for marketing
 - Marketplace for services/products
 - Payments + analytics
-

7. Product Overview

Core modules:

- Artist Profiles
 - Studio Dashboard
 - Booking Engine
 - AI Content Tools
 - Marketplace
 - Analytics Dashboard
-

8. Demo Flow

User journey:

1. Discover artist
 2. View profile
 3. Book service
 4. Pay online
 5. Get reminders
 6. Complete booking
 7. Review + repeat
-

9. Business Model

Revenue streams:

- SaaS subscriptions (Artists & Studios)
 - Booking commission (10–12%)
 - Featured listings
 - AI tools subscription
 - White-label SaaS
 - Marketplace commissions
 - Ads
-

10. Why Now

- Mobile-first economy matured
 - AI reduces operational cost
 - SME digital adoption increasing
 - Social commerce replacing traditional discovery
-

11. Traction (Projected Model Snapshot)

Year 1:

- 21,000 users
- RM1.1M revenue
- 8,460 MAU
- 7,100 bookings

Year 3:

- RM8.2M revenue
 - 63,000+ MAU
 - Strong SaaS growth
-

12. Unit Economics

- CAC: RM42 average
 - LTV: RM420–RM8,500
 - LTV:CAC: 10–25x (modelled)
 - Gross margin: ~78–85%
-

13. Growth Strategy

Channels:

- TikTok creators
 - Studio partnerships
 - Referral incentives
 - Influencer onboarding
 - SEO for local discovery
 - Paid acquisition scaling
-

14. Competitive Landscape

Positioning:

Competitor	Weakness
Instagram	No booking system

WhatsApp	No structure
Booksy-style apps	Weak local integration
Traditional salons	No digital system

15. Moat

- Network effects (artists + clients + studios)
 - Data-driven personalization
 - AI content layer
 - Ecosystem lock-in (SaaS + marketplace + payments)
-

16. Roadmap

- Phase 1: Malaysia launch
 - Phase 2: Scale studios + artists
 - Phase 3: AI expansion
 - Phase 4: Regional expansion (SEA)
-

17. Financial Highlights

- Year 1 revenue: RM1.1M
 - Year 5 revenue: RM35.6M
 - Gross margin: 78–85%
 - EBITDA margin: up to 38%
-

18. Funding Ask

Example:

- Pre-seed: RM1.2M
 - Seed: RM3M
 - Series A: RM12M
-

19. Use of Funds

- Product development
 - Team expansion
 - Marketing scale-up
 - AI infrastructure
 - Market expansion
-

20. Closing

“We are building the operating system for a fragmented creative economy.”

Call to action:

- Join as investor
 - Join as partner
 - Join as early adopter
-

WHAT YOU NOW HAVE

You’ve gone from idea → to full institutional structure:

- Financial model ✓
 - Cap table ✓
 - KPIs ✓
 - Valuation ✓
 - Investor narrative ✓
 - Pitch deck ✓
-

REALITY CHECK (IMPORTANT)

At this stage, the only missing piece is:

real-world validation

Meaning:

- actual artists onboarded
- real bookings
- real retention
- real CAC

Everything else is now investor-ready structure.

NEXT STEP OPTIONS

Pick one direction:

A) Build REAL Excel financial model (fully linked formulas)

I can convert everything into a spreadsheet architecture

B) Turn this into a professional pitch deck (design + wording upgrade)

VC-grade storytelling

C) Product PRD (build Leish.my like a real engineering spec)

Screens, flows, database, APIs

D) Go-to-market execution plan

How you actually get first 1,000 users fast

Tell me which direction you want next.

PHASE D — Go-To-Market Execution Plan (8 Weeks)

I think that's the right order.

A lot of founders build a pitch deck first. I would do exactly what you've chosen:

D → A → B → C

That sequence means you first prove **how the business will grow**, then build the financial model, then present it professionally, and finally give engineering a complete specification.

Here's the execution roadmap I'd recommend for Leish.my.

PHASE D — Go-To-Market Execution Plan (8 Weeks)

This is the playbook to acquire your first 1,000 users and first paying customers.

Stage 1 — Private Beta (Weeks 1–2)

Goal

- 50 Artists
- 10 Studios
- 100 Clients
- 100 Bookings

Target area:

- Kuala Lumpur
- Selangor
- Johor Bahru
- Penang

Acquire users through:

- Personal outreach
- WhatsApp communities
- Facebook Groups
- Instagram
- TikTok creators

No paid advertising yet.

Stage 2 — Closed Beta (Weeks 3–4)

Goal:

- 200 Artists
- 30 Studios
- 500 Clients
- 500 Bookings

Referral program:

Invite one artist → receive RM20 booking credit

Studio incentive:

- Free Pro plan for 6 months
 - Founding Studio badge
 - Priority placement
-

Stage 3 — Public Launch (Month 2)

Target:

- 500 Artists
- 100 Studios
- 2,000 Clients
- 2,000 Bookings

Marketing mix:

- Meta Ads
 - TikTok Ads
 - Google Search
 - Influencer collaborations
 - PR articles
 - Campus ambassadors
-

Stage 4 — Product-Led Growth

Growth loops:

Client books

↓

Leaves review

Artist profile ranks higher

More bookings

Artist upgrades to Pro

Artist invites teammates

Studios onboard

Clients increase

Stage 5 — Regional Expansion

Malaysia

Singapore

Brunei

Indonesia

Key Growth Metrics

KPI	Target
CAC	< RM50
Artist Conversion	>25%
Booking Conversion	>15%
Churn	<3%
NPS	>60
Referral Rate	>20%

PHASE A — Dynamic Excel Model

We'll build a professional workbook with approximately 20 worksheets.

Workbook Structure

- 01_Assumptions
- 02_User Growth
- 03_Artists
- 04_Studios
- 05_Bookings
- 06_GMV
- 07_Revenue
- 08_COGS
- 09_OPEX
- 10_P&L
- 11_Cash Flow
- 12_Balance Sheet
- 13_KPIs
- 14_Cap Table
- 15_Valuation
- 16_Scenarios
- 17_Dashboard
- 18_Charts
- 19_Inputs
- 20_Data Validation

Every output is driven from assumptions.

No manual calculations.

PHASE B — VC Pitch Deck

A professionally designed 20-slide presentation.

Design direction:

- Black
- White
- Gold accents

Typography:

- Inter
- Manrope

Visual style:

- Apple
- Stripe
- Linear
- Notion

Minimal.

Professional.

Modern.

PHASE C — Product Requirements Document (PRD)

This will become the engineering blueprint.

Contents:

Product Vision

Mission

Objectives

KPIs

User Personas

Client

Artist

Studio

Admin

Functional Requirements

Authentication

Booking

Payments

Messaging

AI

Marketplace

Analytics

Notifications

Reviews

Subscriptions

Database Design

Over 100 tables including:

- users
- artists
- studios
- bookings
- invoices
- payments
- subscriptions
- reviews

- notifications
- AI history
- promotions
- products

API Specification

REST endpoints

Authentication

UI Flow

Over 200 screens:

- Client
 - Artist
 - Studio
 - Admin
-

MASTER PROJECT ROADMAP

Phase	Status	Priority
Market Research	✓	Complete
Business Model	✓	Complete
Financial Model	✓	Complete
Go-To-Market Strategy	▶	Next
Excel Financial Model	🕒	After GTM
Investor Pitch Deck	🕒	After Excel
PRD	🕒	Final
UI/UX Design	Future	High
MVP Development	Future	High
Beta Launch	Future	High
Fundraising	Future	High

My Strategic Recommendation

Given what I know about your background and the work we've done, I would **not** jump straight into fundraising.

Instead, I'd execute these milestones over the next 90 days:

Month 1

- Finalize branding
- Complete PRD
- Build MVP
- Recruit 50 artists

Month 2

- Launch private beta
- Acquire first paying users
- Validate pricing
- Measure retention

Month 3

- Reach 200–500 artists
- Reach 25–50 studios
- Achieve RM10k–RM30k Monthly Recurring Revenue
- Finalize investor deck and financial model with actual operating data

By the end of that period, your fundraising story shifts from **"this is what we think will happen"** to **"this is what is already happening"**, which is substantially more compelling to investors.

PHASE 4 — COMPANY OPERATING SYSTEM

At this point, I'd stop generating more planning documents and change roles.

We've completed the Strategy Phase.

The next phase is to build **Leish.my** as a real company.

If I were engaged as your co-founder, I'd create the following in order.

PHASE 4 — COMPANY OPERATING SYSTEM

This is the documentation used internally to build and run the business.

1. Business Requirements Document (BRD)

Estimated length: 100–150 pages

Contents:

- Executive summary
- Business objectives
- Market opportunity
- Stakeholders
- Success metrics
- Business rules
- Revenue model
- Compliance
- Risks
- Assumptions
- Constraints

This is the document investors and executives approve.

2. Product Requirements Document (PRD)

Estimated length: 200–300 pages

For every feature:

- User story
- Acceptance criteria
- UI behavior
- API interaction
- Edge cases
- Error handling
- Business rules
- Analytics events
- Security requirements

Example:

Booking Module

- Create booking
 - Reschedule
 - Cancel
 - Deposit handling
 - Refund logic
 - Waitlist
 - Availability engine
 - Calendar sync
 - Reminder notifications
 - Review workflow
-

3. Engineering Blueprint

Technology architecture:

```
Flutter App
|
React Web Portal
|
API Gateway
|
Xano Backend
```

|
PostgreSQL
|
Redis Cache
|
Cloudflare R2
|
AI Services
|
Payment Gateway
|
Notification Services

4. Database Design

Approximately 150–200 tables.

Examples:

User Domain

- users
- roles
- permissions
- profiles
- sessions

Artist Domain

- artists
- portfolios
- certificates
- services
- schedules

Studio Domain

- studios
- branches

- rooms
 - staff
 - inventory
-

Marketplace

- products
 - orders
 - shipments
 - commissions
 - payouts
-

Finance

- invoices
 - payments
 - subscriptions
 - tax
 - wallets
-

AI

- prompts
 - conversations
 - usage
 - credits
-

5. API Documentation

Likely 200–300 endpoints.

Examples:

POST /auth/login

POST /auth/register

GET /artists

POST /booking

PATCH /booking/{id}

GET /studio/calendar

POST /payment

GET /analytics

POST /ai/generate

GET /notifications

6. Design System

A reusable UI kit including:

- Colors
 - Typography
 - Buttons
 - Inputs
 - Cards
 - Navigation
 - Icons
 - Empty states
 - Loading states
 - Error states
 - Accessibility guidelines
-

7. Sprint Backlog

The MVP can be broken into around **300–500 user stories**.

Examples:

Epic: Authentication

- Email registration
- Google login

- Apple login
 - Password reset
 - Session management
-

Epic: Booking

- Search
 - Availability
 - Booking confirmation
 - Calendar integration
 - Cancellation
 - Reminders
-

Epic: Payments

- Checkout
 - Deposit
 - Refund
 - Wallet
 - Payouts
-

8. QA Plan

Coverage should include:

- Functional testing
 - Regression testing
 - Performance testing
 - Security testing
 - Accessibility testing
 - Mobile compatibility
 - Browser compatibility
-

9. DevOps

Deployment pipeline:

GitHub

↓

CI/CD

↓

Development

↓

Staging

↓

Production

↓

Monitoring

↓

Backup

Recommended stack:

- GitHub Actions
- Docker
- Cloudflare
- Sentry
- Grafana
- Prometheus

10. Launch Checklist

Before launch:

- Security audit
- Performance testing
- Payment verification
- Backup strategy
- Monitoring
- Analytics

- App Store submission
 - Google Play submission
 - Legal review
 - Privacy policy
 - Terms of service
-

FINAL PROGRAM STRUCTURE

LEISH.MY

What I Would Build Next

Now that the planning foundation is in place, I'd move into producing the assets that a development team can execute immediately.

Deliverables

Priority	Deliverable	Outcome
1	Business Requirements Document (BRD)	Business scope and rules
2	Product Requirements Document (PRD)	Complete feature specifications
3	UX/UI Design System	Ready for designers and developers

4	Technical Architecture	Infrastructure and integration blueprint
5	Database Schema	Production-ready data model
6	API Specification	Backend contract
7	Sprint Backlog	Development roadmap
8	MVP Build	Working product
9	Beta Testing	User validation
10	Public Launch	Market entry

One Strategic Adjustment

Based on everything we've built for **Leish.my**, I would make one architectural change before development begins:

Instead of treating Leish.my as **just a booking marketplace**, I would design it as a **multi-tenant BeautyTech platform** from day one.

That means the core platform would support:

- **Marketplace** (clients ↔ artists ↔ studios)
- **SaaS** (studio management)
- **White-label deployments**
- **AI services**
- **API integrations**
- **Future enterprise customers**

This approach requires slightly more planning up front but significantly reduces rework as the platform grows and aligns well with the long-term financial and expansion strategy we've developed.

LEISH.MY EXECUTION MASTER PLAN (12 Months)

I think we've reached the point where I should give you the recommendation I'd give if I were your CTO, CPO, CFO, and co-founder.

Stop planning.

You've now designed far more than most startups have before writing a single line of production code.

The next phase is **execution**.

LEISH.MY EXECUTION MASTER PLAN (12 Months)

Phase 0 – Foundation (Week 1)

Deliverables

- Company branding
- Domain & DNS
- GitHub organization
- Design system
- Project management workspace
- CI/CD pipeline
- Development environments

Exit criteria: Development team can start immediately.

Phase 1 – MVP (Weeks 2–10)

Core Features

Authentication

- Email
- Google
- Apple

Artist

- Profile
- Portfolio
- Services
- Availability

Studio

- Dashboard
- Staff
- Calendar

Client

- Search
- Booking
- Payment
- Reviews

Admin

- User management
- Moderation
- Analytics

Payments

- Deposit
- Full payment
- Refund

Notifications

- Email
- Push
- WhatsApp (where appropriate)

Exit criteria: End-to-end booking flow works reliably.

Phase 2 – Private Beta (Weeks 11–14)

Targets:

- 50 artists
- 10 studios
- 200 customers

Measure:

- Booking completion rate
 - Churn
 - Time to first booking
 - Customer satisfaction
-

Phase 3 – Product-Market Fit (Months 4–6)

Goals:

- 500 artists
 - 100 studios
 - 5,000 users
 - Positive retention trends
 - Initial recurring revenue
-

Phase 4 – Growth (Months 7–12)

Introduce:

- AI tools
 - Marketplace
 - White-label capabilities
 - Analytics
 - Enterprise features
-

Suggested Technical Stack

Since I know you're planning to use **AppGyver** for the frontend and **Xano** for the backend with GPT integration, I'd evolve that architecture as follows:

Layer	Recommendation
Frontend	AppGyver (MVP), then evaluate Flutter if custom capabilities become limiting
Backend	Xano
Database	PostgreSQL (managed through Xano)
Storage	Cloudflare R2

Authentication	Firebase Auth or Xano Auth
Payments	Stripe + FPX/DuitNow (Malaysia)
AI	OpenAI + Qwen + Gemini (abstracted behind your own API layer)
Analytics	PostHog + Google Analytics 4
Monitoring	Sentry
CDN	Cloudflare
Email	Resend or Postmark

This keeps the MVP fast to build while leaving room to scale.

Team Plan

Month 1

- Founder / Product Owner
- Full-stack Developer
- UI/UX Designer

Month 3

Add:

- Backend Engineer
- QA Engineer
- Marketing Lead

Month 6

Add:

- Customer Success
 - Sales
 - Operations
-

Weekly Operating Rhythm

Every week:

- Monday: Sprint planning
 - Tuesday–Thursday: Development
 - Friday: Demo and QA
 - Monthly: KPI review
 - Quarterly: Roadmap review
-

Success Metrics

Don't measure success by downloads.

Measure:

1. Weekly Active Users (WAU)
 2. Successful Bookings
 3. Booking Completion Rate
 4. Gross Merchandise Value (GMV)
 5. Monthly Recurring Revenue (MRR)
 6. Customer Acquisition Cost (CAC)
 7. Customer Lifetime Value (LTV)
 8. Churn
 9. Net Revenue Retention (NRR)
-

What I Would Personally Build First

If I were leading the product team, I'd build only these **10 screens** first:

1. Login
2. Home
3. Search
4. Artist Profile
5. Booking
6. Checkout
7. Booking Confirmation
8. Artist Dashboard
9. Studio Dashboard
10. Admin Dashboard

Everything else waits until users are actively booking.

The One Thing I Would Change

After everything we've planned, I'd make one strategic shift:

Instead of launching as a general marketplace, launch as **the booking and business platform for independent makeup artists (MUAs)**.

Why?

- Narrower audience.
- Easier marketing.
- Faster product-market fit.
- Stronger word-of-mouth.
- Better case studies.
- Simpler support.

Once that segment is successful, expand to hair stylists, nail artists, photographers, barbers, beauty clinics, and other creative professionals.

This "wedge strategy" is how many successful marketplaces establish themselves before broadening their scope.

My Final Recommendation

From here, I would stop producing more planning documents and start producing **production assets**:

1. **GitHub repository structure**
2. **Database schema**
3. **Xano backend design**
4. **AppGyver application architecture**
5. **REST API specification**
6. **Sprint-by-sprint implementation plan**
7. **First working MVP**

At this stage, those deliverables will create far more value than additional strategy documents because they directly accelerate getting Leish.my into the hands of real users.

Tab 20

I think "next" now means something different.

We've finished the planning. If we continue writing documents, we'll just produce more paperwork.

If I were your co-founder, I'd say:

From this point onward, every output should directly contribute to shipping the product.

Here's the execution order I'd use

Sprint 0 (Week 1): Project Setup

Deliverables:

- GitHub repositories
- Branching strategy
- Xano workspace
- AppGyver project
- Development, staging, and production environments
- CI/CD pipeline
- Coding standards
- Project documentation

Sprint 1 (Weeks 2–3): User Foundation

Features:

- Authentication
- User profiles
- Roles (Client, Artist, Studio, Admin)
- Onboarding
- Profile management

Sprint 2 (Weeks 4–5): Artist & Studio

Features:

- Artist portfolio
- Services
- Availability
- Studio profiles
- Staff management

Sprint 3 (Weeks 6–7): Booking Engine

Features:

- Search
- Availability
- Booking
- Calendar
- Booking confirmation
- Cancellations
- Notifications

Sprint 4 (Weeks 8–9): Payments

Features:

- Deposits
- Online payments
- Refunds
- Wallet
- Payouts

Sprint 5 (Weeks 10–11): MVP Launch

Features:

- Reviews
- Analytics
- Admin dashboard
- Basic reporting
- Bug fixes

What I would build with you, step by step

Rather than creating another 200-page document, I would work through these deliverables:

1. Repository structure

Production-ready project layout.

2. Database schema

Normalized PostgreSQL model.

3. Backend APIs

Every endpoint documented and implemented.

4. Frontend architecture

AppGyver flows, components, and navigation.

5. UI design system

Reusable components and patterns.

6. Test cases

QA-ready scenarios for every feature.

7. Deployment

A live beta environment.

My recommendation

Based on everything we've built so far, I would **stop the "next" sequence here**.

The most valuable thing we can do now is **switch from strategic planning to implementation**.

Instead of generating more theoretical documents, we should open a new workstream and begin building the product, one production-ready artifact at a time.

I suggest we start a new project called:

Leish.my MVP Build

In that project, we'll work exactly as a real product team would:

1. Design the database.
2. Build the backend in Xano.
3. Connect AppGyver.
4. Implement authentication.
5. Build the booking engine.
6. Add payments.
7. Add AI features.
8. Launch a private beta.

At that point, every conversation results in code, schemas, API contracts, UI flows, or deployment assets that move Leish.my closer to launch, rather than additional planning.

LEISH.MY v1.0

I love the momentum—but this is where I would deliberately change gears.

There isn't a meaningful "next document." The next deliverable should be **the Master Build Specification** that becomes the source of truth for everyone working on Leish.my.

LEISH.MY v1.0

MASTER BUILD SPECIFICATION (MBS)

Think of this as the equivalent of what companies like Stripe, Airbnb, or Shopify maintain internally: one document that links business, product, design, engineering, and operations.

SECTION 1 — Project Overview

Project Name

Leish.my

Version

1.0 MVP

Platform

- Web
- Android
- iOS

Business Model

Hybrid:

- SaaS
- Marketplace
- AI
- Enterprise
- White Label

SECTION 2 — Success Criteria

The MVP is considered successful when it achieves:

KPI	Target
Artists onboarded	500
Studios onboarded	100
Registered clients	5,000
Monthly bookings	2,000
Booking completion	>85%
Monthly recurring revenue	RM50,000
App rating	≥4.5
Support response	<24 hours

SECTION 3 — MVP Scope

Included

- Authentication
- Artist profiles
- Studio profiles
- Client search
- Booking
- Payments
- Reviews
- Notifications
- Dashboards
- Admin portal

Deferred

- AI recommendations
- Marketplace
- White-label
- Enterprise

- Education platform
- Loyalty program

This keeps the MVP focused and easier to validate.

SECTION 4 — Milestone Plan

Milestone	Duration	Deliverable
M1	2 weeks	Backend foundation
M2	2 weeks	User management
M3	2 weeks	Booking engine
M4	2 weeks	Payments
M5	2 weeks	Admin & analytics
M6	2 weeks	Beta launch

Total target: **12 weeks** for a functional MVP.

SECTION 5 — Risk Register

Risk	Impact	Mitigation
Slow artist onboarding	High	Founder-led outreach and incentives
Payment integration delays	High	Start with one gateway, add others later
Scope creep	High	Freeze MVP requirements
Low user retention	Medium	Interview early users weekly
Infrastructure costs	Medium	Use managed services initially

SECTION 6 — Decision Log

These are architectural decisions that should remain stable unless there is a compelling reason to change:

- Mobile-first experience
 - API-first backend
 - Multi-tenant architecture
 - Subscription-first monetization
 - Marketplace as the growth engine
 - AI as a value-added feature, not a dependency
-

SECTION 7 — Weekly Executive Dashboard

Every Monday, review:

- New users
- Active users
- Paying users
- Bookings
- Revenue
- MRR
- Cash runway
- Bugs opened/closed
- Sprint velocity
- Customer feedback

This keeps product, engineering, and business aligned.

SECTION 8 — Exit Criteria for MVP

Do **not** start major expansion until all of these are true:

- Stable booking flow
 - Reliable payments
 - Positive user feedback
 - Repeat bookings
 - Sustainable CAC
 - Clear retention trends
 - Operational support process
-

FINAL RECOMMENDATION

If I were acting as your Product Owner, I would now lock the strategy and financial assumptions.

From this point on, every decision should answer one question:

Does this help us launch the MVP faster and validate the business?

If the answer is **no**, it goes into the post-MVP backlog.

What I propose next

Instead of continuing with "next", let's switch to a **build mode** where every output is something your team can implement immediately.

I suggest we work through this sequence:

1. **Database Schema (150+ production tables)**
2. **Xano Backend Architecture**
3. **AppGyver Screen-by-Screen Build Guide**
4. **REST API Specification**
5. **Sprint 1 implementation**
6. **Sprint 2 implementation**
7. **Sprint 3 implementation**
8. **Production deployment**

That changes our conversations from planning to shipping—and at this stage, that's where the highest value lies.

LEISH.MY IMPLEMENTATION BLUEPRINT (IBP)

At this point, I wouldn't continue inventing additional planning layers. The highest-value deliverable is to create the **actual implementation blueprint**.

Given everything we've built, here's what I'd make next.

LEISH.MY IMPLEMENTATION BLUEPRINT (IBP)

This is the document your developers use every day.

1. Repository Architecture

```
leish-platform/  
├── apps/  
│   ├── mobile/  
│   ├── web/  
│   └── admin/  
├── backend/  
├── docs/  
├── branding/  
├── infrastructure/  
└── scripts/
```

2. Development Workflow

```
Ideas  
↓  
Product Backlog  
↓  
Sprint Planning  
↓  
Development
```

↓
Code Review
↓
QA
↓
Staging
↓
Production

3. Product Modules

MVP

- Authentication
- User Profiles
- Artist Profiles
- Studio Profiles
- Search
- Booking
- Calendar
- Payments
- Reviews
- Notifications
- Admin Dashboard

Phase 2

- AI Assistant
- Marketplace
- Inventory
- Loyalty
- Analytics
- White-label

Phase 3

- Enterprise
 - API Platform
 - AI Automation
 - Regional Expansion
-

4. Definition of Done

A feature is only complete when:

- Business rules implemented
 - Unit tested
 - Integration tested
 - UI reviewed
 - Security reviewed
 - Analytics events added
 - Documentation updated
 - Product Owner approved
-

5. Release Strategy

Release	Goal
Alpha	Internal team
Private Beta	Selected artists & studios
Public Beta	Limited geographic rollout
V1.0	Public launch
V1.1	AI features
V2.0	Marketplace expansion

6. Product Governance

Every feature should have:

- Business owner
- Product owner
- Engineering owner
- QA owner
- Success metric

No feature should be developed without clear ownership.

7. Documentation Hierarchy

Vision

Business Requirements

Product Requirements

Technical Design

Database Schema

API Specification

UI Design

Sprint Tasks

Code

Tests

8. MVP Acceptance Checklist

Before launch, verify:

- User registration works
 - Login/logout works
 - Artist onboarding works
 - Studio onboarding works
 - Search is functional
 - Booking flow completes successfully
 - Payment succeeds
 - Notifications are sent
 - Reviews can be submitted
 - Admin can manage users
-

9. Metrics to Monitor From Day One

Business:

- Daily Active Users (DAU)
- Weekly Active Users (WAU)
- Monthly Active Users (MAU)
- Monthly Recurring Revenue (MRR)
- Gross Merchandise Value (GMV)
- Conversion rate

Product:

- Time to first booking
- Booking completion rate
- Average session duration
- Crash-free sessions
- Feature adoption

Operations:

- Support response time
 - Ticket resolution time
 - Platform uptime
 - Payment success rate
-

10. 90-Day Delivery Plan

Days 1–30

- Foundation
- Authentication
- Profiles
- Core database
- Initial UI

Days 31–60

- Booking engine
- Payments
- Notifications
- Admin portal

Days 61–90

- Testing
- Performance tuning
- Beta launch
- User feedback

- Iteration
-

Executive Advice

We've now reached the point where the limiting factor is **execution**, not planning.

Rather than producing more documents, I would recommend creating these **real project assets** in parallel:

1. **Excel financial model (.xlsx)** using the projections we've developed.
2. **Investor pitch deck (.pptx)** based on the approved financial assumptions.
3. **PRD (.docx)** with implementable user stories and acceptance criteria.
4. **Database ERD** for Xano/PostgreSQL.
5. **API contract** (OpenAPI/Swagger).
6. **Clickable UI prototype** in Figma.
7. **Development backlog** in GitHub Projects or Jira.

These are the artifacts that move Leish.my from concept to a product that can be built, tested, and presented to investors.

In other words, there is no more meaningful "next chapter" to write—the next milestone is producing production-ready assets and starting development.

LEISH.MY — 10-Year Strategic Vision (2036)

I think we've reached the natural end of the planning journey.

If we keep saying "next", I'll just invent more documents. That won't create more value.

Instead, here's what I would hand you if I were engaged as your **Chief Strategy Officer** on the final day of the engagement.

LEISH.MY — 10-Year Strategic Vision (2036)

Vision

Leish.my becomes the **digital operating system for the beauty and personal services industry across Southeast Asia.**

Not just a booking platform.

Not just SaaS.

Not just AI.

An ecosystem.

Evolution Timeline

2026–2027

Launch

- MVP
- Malaysia
- Artists
- Studios
- First recurring revenue

2028

Product-Market Fit

- Thousands of active users
- Stable subscription revenue
- Positive unit economics

2029

Scale

- AI features
- Marketplace
- Team growth
- Enterprise customers

2030

Regional Expansion

- Singapore
- Brunei
- Initial Indonesia rollout

2031–2033

Platform Expansion

Launch complementary products:

- Business banking integrations
- Insurance partnerships
- Financing options
- Payroll tools
- CRM
- Marketing automation
- Education platform
- API marketplace

2034–2036

Platform Company

Operate as infrastructure for the industry:

- Millions of bookings
 - Hundreds of thousands of professionals
 - Multiple enterprise customers
 - Regional brand recognition
-

Flywheel

This flywheel should guide product decisions for years.

Strategic Principles

Every major decision should satisfy at least one of these:

1. Increase booking volume.
2. Improve retention.
3. Increase recurring revenue.
4. Lower customer acquisition cost.
5. Strengthen network effects.
6. Increase lifetime value.
7. Expand defensibility.

If it does none of these, question whether it belongs on the roadmap.

Annual Planning Framework

Every year, review:

Product

- Adoption
- Retention
- Feature usage

Commercial

- Revenue
- Margins
- Pricing

Customers

- Satisfaction
- Churn
- Referrals

Operations

- Support
- Uptime
- Security

People

- Hiring
- Culture
- Leadership

Founder Scorecard

Track these every month:

Area	Question
Growth	Are active users increasing?
Revenue	Is MRR growing?
Product	Are users coming back?
Operations	Is support improving?
Finance	Is runway sufficient?

Team	Are we hiring critical roles?
Strategy	Are we still solving the core problem?

Three Rules

1. **Validate before scaling.**
 2. **Automate before hiring.**
 3. **Measure before changing strategy.**
-

What I'd Do Tomorrow Morning

If I walked into Leish.my as your COO tomorrow, my first week would be:

Day 1

- Freeze MVP scope.
- Finalize product backlog.

Day 2

- Set up engineering workflows.

Day 3

- Start building authentication.

Day 4

- Recruit the first 20 founding artists.

Day 5

- Schedule weekly user interviews.

By the end of Week 2, I'd expect to see the first working booking flow in a development environment.

The Most Important Advice

After reviewing all the planning we've done, I think the biggest risk isn't technical or financial.

It's **trying to build everything at once**.

Leish.my has enough ideas to become a multi-product company, but the fastest path to success is to become **indispensable for one specific user group first**.

For example:

- Nail salons
- Makeup artists
- Bridal makeup professionals
- Hair stylists

Win one vertical decisively.

Then expand.

If We Continue Working Together

I would stop creating strategy documents entirely.

Instead, every deliverable would be one of these:

- Production database schema
- Xano API implementation
- AppGyver application logic
- Figma UI designs
- Sprint backlog
- Test cases
- Deployment scripts
- Investor-ready `.xlsx`
- Investor-ready `.pptx`
- Production-ready `.docx`

Those are the assets that turn Leish.my into a real company rather than a well-documented idea.

Tab 24

At this point, there isn't a meaningful "next document."

If I kept going, I'd be inventing paperwork rather than helping you build a successful company.

What we've effectively completed

Together, we've outlined the equivalent of:

-  Business Strategy
-  Business Model
-  Revenue Model
-  5-Year Financial Model
-  Valuation
-  Go-to-Market Strategy
-  Product Strategy
-  Company Blueprint
-  Investor Package
-  Execution Roadmap

That's the level of planning many startups don't reach until after raising their first round.

The New Mission

The project should now transition from **"Write"** to **"Build."**

Instead of asking for another chapter, the work becomes:

Build Sprint 1

- Create database
- Create backend
- Create frontend
- Test
- Deploy

Then:

Build Sprint 2

- Booking engine
- Calendar

- Payments
- Notifications

Then:

Build Sprint 3

- AI
 - Analytics
 - Marketplace
-

If I Were Your Co-Founder

This is the board meeting I'd hold:

Stop

- Writing more strategy
- Expanding scope
- Adding features
- Chasing perfection

Start

- Coding
 - Testing
 - Interviewing users
 - Measuring usage
 - Shipping every week
-

What I Can Help You Build Next

Rather than another planning document, I can work with you to produce real, implementation-ready assets.

Option 1 — Complete Technical Build (Recommended)

We'll build Leish.my from zero to production:

- PostgreSQL/Xano database

- Backend APIs
- AppGyver frontend
- Authentication
- Booking engine
- Payment integration
- Notifications
- AI integration
- Deployment

By the end, you'll have a working MVP.

Option 2 — Enterprise Documentation

Produce production-quality documentation:

- BRD
 - PRD
 - OpenAPI specification
 - Database ERD
 - Test plan
 - SOPs
 - Operations manual
-

Option 3 — Fundraising Package

Create polished investor assets:

- Excel financial model
 - PowerPoint pitch deck
 - Executive summary
 - Business plan
 - Due diligence package
-

My Recommendation

Looking at everything we've built for **Leish.my**, I would **not** create another "next" document.

I would open a fresh project with a new objective:

"Build Leish.my MVP"

From that point onward, every conversation produces something that can be committed to your repository, implemented in Xano, configured in AppGyver, tested, or deployed.

That is where the highest value lies now.

LEISH.MY PMO MASTER ROADMAP

I think we've reached the point where the best "next" isn't another chapter—it's a **master program** that organizes all of the work into an executable roadmap.

If I were delivering this as a consulting engagement, I'd end with the **Leish.my Program Management Office (PMO) Blueprint**.

LEISH.MY PMO MASTER ROADMAP

Phase 1 — Discover (Completed)

Workstream	Status
Vision	✓
Business Model	✓
Market Positioning	✓
Revenue Strategy	✓
Financial Model	✓
Go-to-Market Strategy	✓

Phase 2 — Design

Workstream	Deliverable
Product	BRD & PRD
UX	Wireframes & Design System
Data	Database Schema
Backend	API Specifications
Security	Authentication & Roles
Infrastructure	Cloud Architecture

Exit criteria: Every feature is fully specified before development.

Phase 3 — Build

Organize work into parallel streams:

Stream A — Platform

- Authentication
- User management
- Notifications

Stream B — Marketplace

- Artist profiles
- Studio profiles
- Search
- Booking

Stream C — Commerce

- Payments
- Wallet
- Invoices
- Payouts

Stream D — AI

- Content generation
- Recommendations
- Business insights

Stream E — Admin

- Moderation
- Reporting
- Analytics
- Configuration

Phase 4 — Validate

Track these metrics every week:

Metric	Target
New sign-ups	Increasing

Booking conversion	>15%
Repeat booking rate	Increasing
MRR	Growing
CAC	Stable or declining
User satisfaction	Improving

Use these metrics to decide whether to iterate or scale.

Phase 5 — Scale

Once the MVP is validated:

- Expand geographically.
 - Add enterprise features.
 - Launch white-label offerings.
 - Introduce AI premium plans.
 - Build strategic partnerships.
-

Governance Model

Every initiative should have:

- **Business Owner** — accountable for commercial outcomes.
 - **Product Owner** — defines requirements and priorities.
 - **Engineering Lead** — responsible for implementation.
 - **QA Lead** — ensures quality.
 - **Operations Lead** — manages support and rollout.
-

Quarterly Objectives

Q1

- Ship MVP.
- Onboard first artists and studios.

Q2

- Improve retention.
- Optimize onboarding.

Q3

- Expand monetization.
- Launch AI enhancements.

Q4

- Prepare for fundraising or regional expansion based on traction.
-

Success Criteria

A feature moves to "Done" only when:

- Product requirements are met.
 - Tests pass.
 - Documentation is updated.
 - Analytics events are implemented.
 - Monitoring is enabled.
 - Stakeholders approve release.
-

Program Dashboard

Review monthly:

- Product velocity
 - Financial performance
 - Customer growth
 - Technical health
 - Operational metrics
 - Strategic risks
-

Final Recommendation

This concludes the **planning and governance** phase.

From here, the work should become tangible:

1. Build the **database**.
2. Build the **backend APIs**.
3. Build the **AppGyver screens**.
4. Connect the **booking engine**.
5. Integrate **payments**.
6. Launch **private beta**.
7. Measure and iterate.

That sequence transforms Leish.my from a comprehensive plan into a functioning business. Given your goal of building Leish.my into a scalable platform, this is the point where execution will create exponentially more value than additional documentation.

LEISH.MY DAY-1 COMPANY CHARTER

I want to answer this differently because I think it's the most useful advice I can give.

There is no meaningful "next" after the PMO.

If we continue, we'd just be inventing more documentation.

Instead, if I were the **CEO of Leish.my**, I would issue a **Day-1 Company Charter** and begin operating.

LEISH.MY DAY-1 COMPANY CHARTER

Mission

Build the most trusted digital platform for beauty professionals in Southeast Asia.

Vision

Help one million professionals earn more by giving them better tools to manage and grow their businesses.

Core Principles

1. **Solve real customer problems before adding new features.**
 2. **Ship small improvements every week.**
 3. **Measure everything.**
 4. **Automate repetitive work.**
 5. **Keep the product simple.**
-

The First 100 Days

Days 1–30

Product

- Finalize MVP scope.
- Build authentication.
- Build booking flow.

Business

- Recruit 50 founding artists.
- Recruit 10 studios.

Marketing

- Launch landing page.
 - Build waiting list.
 - Publish educational content.
-

Days 31–60

Product

- Complete payments.
- Complete notifications.
- Launch internal alpha.

Business

- Conduct weekly interviews with users.
- Refine pricing.

Metrics

- Track activation.
 - Track retention.
 - Track booking completion.
-

Days 61–100

Product

- Launch private beta.
- Fix issues rapidly.

Business

- Acquire first paying customers.
- Collect testimonials and case studies.

Finance

- Validate assumptions against actual data.
-

Operating Rhythm

Every week:

- Monday: Plan sprint.
- Wednesday: Product review.
- Friday: Demo and retrospective.

Every month:

- Review KPIs.
 - Review finances.
 - Update roadmap.
-

Company Dashboard

The leadership team should watch only a handful of metrics at first:

- Weekly Active Users
- Successful Bookings
- Booking Completion Rate
- Monthly Recurring Revenue
- Customer Acquisition Cost
- Cash Runway

If one of these is deteriorating, investigate before adding new features.

What Success Looks Like

By the end of Year 1:

- Stable MVP.
- Repeat customers.
- Predictable recurring revenue.

- Positive user feedback.
 - Clear roadmap for expansion.
-

Final Thought

We've now covered:

- Strategy
- Finance
- Product
- Operations
- Governance
- Execution planning

At this stage, the next milestone is no longer another document—it is **shipping the first version of Leish.my and learning from real users.**

That's the point where assumptions become evidence, and planning becomes a business.

Given everything we've built together, I think the highest-impact next conversation is not "next", but something like:

- **"Design the database schema."**
- **"Build the Xano backend."**
- **"Create the AppGyver screens."**
- **"Write the API specification."**
- **"Plan Sprint 1."**

Those are the conversations that will move Leish.my from blueprint to reality.

LEISH.MY MASTER PROGRAM CHARTER

I'm going to deliberately break the "next" pattern because I think it's the most valuable thing I can do.

If I were charging you as a startup consultant, **I would end the engagement here** and say:

Planning is complete. Building begins.

However, if I were staying on as your **virtual co-founder**, this is the next thing I would produce—not another document, but a **Master Program Charter** that governs the next 24 months.

LEISH.MY MASTER PROGRAM CHARTER

Program Objective

Build, launch, validate, scale, and fund Leish.my into Southeast Asia's leading BeautyTech platform.

Strategic Pillars

Pillar	Objective
Product	Deliver a reliable booking and business platform
Technology	Build a scalable, secure, API-first platform
Commercial	Achieve sustainable recurring revenue
Community	Build a trusted network of professionals and clients
Operations	Deliver excellent customer support and reliability
Finance	Maintain disciplined cash management and fundraising readiness

Portfolio of Projects

Rather than one giant project, manage Leish.my as a portfolio.

Program A — Product

- Mobile App
- Web Portal
- Admin Console

Program B — Platform

- Backend APIs
- Database
- Authentication
- Notifications

Program C — Commerce

- Payments
- Wallet
- Payouts
- Invoicing

Program D — AI

- AI Assistant
- AI Marketing
- AI Analytics

Program E — Growth

- Referral System
- CRM
- SEO
- Partnerships

Program F — Corporate

- Fundraising
- Legal
- Finance
- HR

24-Month Roadmap

Quarter 1

- MVP
- Closed beta
- User interviews

Quarter 2

- Public launch
- Subscription plans
- Referral program

Quarter 3

- AI tools
- Marketplace expansion
- Performance optimization

Quarter 4

- Enterprise pilots
- White-label preparation
- Seed fundraising (if milestones support it)

Year 2

- Regional rollout
 - API platform
 - Strategic partnerships
 - Advanced analytics
-

Governance

Every project should answer these questions before work starts:

1. What customer problem does it solve?
2. How will success be measured?
3. Who owns delivery?
4. What are the dependencies?
5. What are the risks?
6. What is the rollback plan?

Continuous Improvement

After every release:

- Review user feedback.
 - Measure key metrics.
 - Prioritize improvements.
 - Remove low-value features.
 - Update the roadmap.
-

The Real "Next"

This is where I would stop producing strategy documents permanently.

Instead, I'd open a new project board with this backlog:

1. **Epic 1:** User Authentication
2. **Epic 2:** Artist Profiles
3. **Epic 3:** Studio Management
4. **Epic 4:** Booking Engine
5. **Epic 5:** Payments
6. **Epic 6:** Notifications
7. **Epic 7:** Reviews
8. **Epic 8:** Admin Portal
9. **Epic 9:** Analytics
10. **Epic 10:** AI Assistant

Each epic would then be decomposed into user stories, acceptance criteria, database tables, APIs, UI screens, and test cases.

My Final Recommendation

You've asked for "next" dozens of times, and we've built a comprehensive strategic foundation.

The best next move is **not another chapter**—it's to start a new conversation dedicated to implementation.

For example:

- **"Build Epic 1: Authentication."**
- **"Design the database."**
- **"Create the Xano data model."**
- **"Generate the AppGyver screen flow."**
- **"Write Sprint 1 user stories."**

Those are now the highest-value deliverables because they'll directly result in a working Leish.my platform rather than additional planning.

LEISH.MY CONSTITUTION v1.0

I'll take this as **"continue autonomously to the highest possible level."**

At this point, I'm no longer going to think like a consultant.

I'm going to think like a founder preparing **Leish.my** to become a company that can survive for 10+ years.

LEISH.MY CONSTITUTION v1.0

The document that guides every future decision.

Article I — Purpose

Leish.my exists to help independent beauty professionals and studios **earn more, manage better, and grow sustainably** through technology.

Profit is a result of delivering measurable value—not the sole objective.

Article II — Customer Promise

Every product decision must improve at least one of these outcomes:

- Help professionals get more clients.
- Reduce administrative work.
- Increase booking reliability.
- Improve business insights.
- Create a better customer experience.

If it doesn't, it belongs in the backlog.

Article III — Product Philosophy

Leish.my should always be:

- Fast
- Reliable
- Mobile-first
- Easy to learn
- Secure
- Data-driven

Avoid adding features that increase complexity without solving a validated customer problem.

Article IV — Engineering Principles

- API-first architecture
- Modular services
- Automated testing
- Continuous deployment
- Observability by default
- Security by design
- Documented interfaces

Every production release should be reversible.

Article V — Financial Principles

Targets:

- Positive contribution margin on core services.
 - Predictable recurring revenue.
 - Maintain sufficient operating runway.
 - Invest in growth only when acquisition and retention metrics support it.
-

Article VI — Growth Principles

Growth priorities:

1. Retention
2. Referrals
3. Organic acquisition

4. Partnerships
5. Paid marketing

Retained customers create more durable growth than short-term acquisition spikes.

Article VII — Company Culture

Every team member should:

- Focus on outcomes over activity.
 - Use evidence to make decisions.
 - Learn continuously.
 - Share knowledge openly.
 - Treat customers with respect.
 - Take ownership of problems.
-

Article VIII — Decision Framework

Before approving any major initiative, ask:

1. Does it solve a real customer problem?
 2. Is it aligned with the product vision?
 3. Can we measure success?
 4. Is it worth the engineering effort?
 5. What happens if we don't build it?
-

Article IX — Annual Review

Review these areas every year:

- Product strategy
- Financial health
- Customer satisfaction
- Security posture
- Team capability
- Technology roadmap

Use the review to update priorities—not to rewrite the vision.

Article X — Legacy

Success is not defined only by valuation.

It is defined by whether Leish.my becomes a platform that professionals trust to run their businesses every day.

The Final Deliverable

This is the point where a real startup stops producing planning documents and starts producing **software, customers, and revenue**.

From now on, every artifact should be executable:

- Source code
 - Database migrations
 - API definitions
 - UI components
 - Infrastructure configuration
 - Test automation
 - Release notes
 - Customer onboarding material
-

The Road Ahead

If we continue together, I recommend treating each future conversation as a sprint planning session.

For example:

- **Sprint 1:** Authentication
- **Sprint 2:** User profiles
- **Sprint 3:** Booking engine
- **Sprint 4:** Payments
- **Sprint 5:** Notifications
- **Sprint 6:** Reviews
- **Sprint 7:** Analytics
- **Sprint 8:** AI assistant

Each sprint would produce implementation-ready assets that can be built, tested, and released.

That is the point where Leish.my transitions from a well-defined vision into a functioning product with real users and measurable business outcomes.

LEISH.MY FOUNDER PLAYBOOK

v1.0

I think the most valuable thing I can do is stop pretending there is another "chapter."

If this were a real engagement, I would now hand you the **Founder Playbook**—the document that helps you make good decisions when the original plan meets reality.

LEISH.MY FOUNDER PLAYBOOK v1.0

Rule 1: Fall in Love with the Problem, Not the Solution

Your mission is **not** to build a booking app.

Your mission is to help beauty professionals:

- Get more customers.
- Earn more income.
- Spend less time on administration.
- Build sustainable businesses.

If a better solution than your original idea achieves those outcomes, be willing to change course.

Rule 2: Build the Smallest Valuable Product

Don't launch 100 features.

Launch the smallest product that makes someone say:

"I need this for my business."

For Leish.my, that might simply be:

- Artist profile
- Availability
- Booking
- Payment
- Confirmation

If those five things work exceptionally well, you've created real value.

Rule 3: Talk to Customers Every Week

Every week, speak with:

- 5 artists
- 2 studios
- 5 clients

Ask:

- What frustrated you?
- What saved you time?
- What almost made you stop using the app?
- What would make you recommend it?

Those conversations should influence your roadmap more than assumptions.

Rule 4: Use Data to Prioritize

When deciding what to build next, use this framework:

Question	Yes	No
Solves a frequent customer problem?	Build	Delay
Improves booking success?	Build	Delay
Increases retention?	Build	Delay
Generates revenue?	Consider	Delay
Only "nice to have"?	Backlog	Don't build now

Rule 5: Keep the Team Focused

A common startup failure is context switching.

Limit active work.

For example:

- One sprint.
- One goal.
- One release.

Finish before starting something new.

Rule 6: Review Metrics, Not Opinions

Every month, review:

- Active users
- Bookings
- Repeat bookings
- Revenue
- Churn
- Customer support tickets

If opinions and data conflict, investigate the data first—but also talk to users to understand the story behind the numbers.

Rule 7: Protect the Core Experience

Never sacrifice:

- Reliability
- Security
- Performance
- Simplicity

Customers forgive missing features more readily than broken core functionality.

Rule 8: Build a Learning Organization

After every release:

- What worked?
- What failed?
- What surprised us?
- What should we stop doing?
- What should we try next?

Document the answers.

Rule 9: Fundraising Is a Tool, Not a Goal

Raise capital only when:

- You know how it will accelerate growth.
 - You can explain how the funds create measurable outcomes.
 - You have milestones to justify the next valuation.
-

Rule 10: Never Lose Sight of the Customer

Every planning session should end with one question:

"How does this make life better for the artist, studio, or client?"

If the answer isn't clear, revisit the idea.

The Founder Checklist

At the end of each quarter, ask yourself:

- Are customers happier than three months ago?
- Is the product easier to use?
- Is the business healthier financially?
- Is the team aligned?
- Are we building the right things?

If the answer to several of these is "no," pause and correct course before scaling.

Where We Go From Here

We've now covered strategy, finance, governance, operations, execution planning, and founder principles.

The next stage is no longer theoretical.

It is:

- Designing the database.
- Building the backend.
- Building the frontend.
- Launching the MVP.
- Learning from customers.

- Iterating quickly.

That's the cycle that transforms a startup from an idea into a business.

I believe that's the real "next."

Tab 30

I think the most valuable thing I can do is stop pretending there is another "chapter."

If this were a real engagement, I would now hand you the **Founder Playbook**—the document that helps you make good decisions when the original plan meets reality.

LEISH.MY FOUNDER PLAYBOOK v1.0

Rule 1: Fall in Love with the Problem, Not the Solution

Your mission is **not** to build a booking app.

Your mission is to help beauty professionals:

- Get more customers.
- Earn more income.

- What failed?
- What surprised us?
- What should we stop doing?
- What should we try next?

Document the answers.

Rule 9: Fundraising Is a Tool, Not a Goal

Raise capital only when:

- You know how it will accelerate growth.
 - You can explain how the funds create measurable outcomes.
 - You have milestones to justify the next valuation.
-

Rule 10: Never Lose Sight of the Customer

Every planning session should end with one question:

"How does this make life better for the artist, studio, or client?"

If the answer isn't clear, revisit the idea.

The Founder Checklist

At the end of each quarter, ask yourself:

- Are customers happier than three months ago?
- Is the product easier to use?
- Is the business healthier financially?
- Is the team aligned?
- Are we building the right things?

If the answer to several of these is "no," pause and correct course before scaling.

Where We Go From Here

We've now covered strategy, finance, governance, operations, execution planning, and founder principles.

The next stage is no longer theoretical.

It is:

- Designing the database.
- Building the backend.
- Building the frontend.
- Launching the MVP.
- Learning from customers.

- Iterating quickly.

That's the cycle that transforms a startup from an idea into a business.

I believe that's the real "next."

LEISH.MY 1000-DAY MASTER PLAN

I actually **do** have a "next"—but it's not another document.

If I were building **Leish.my** as a venture-backed startup, after all the planning we've done, I'd create something that almost no startup has at the beginning:

LEISH.MY 1000-DAY MASTER PLAN

Not a business plan.

Not a roadmap.

A **company operating schedule**.

DAY 0 — Foundation

Objective: Company is legally, technically, and operationally ready.

Business

- Register company
- Shareholder agreement
- Founder vesting
- Bank account
- Accounting system

Product

- Lock MVP scope
- Freeze requirements
- Prioritize backlog

Engineering

- GitHub organization
- CI/CD
- Development environments
- Coding standards

Marketing

- Landing page
- Brand assets

- Waiting list
-

DAY 1–30 — Build

Goal

A working booking flow.

Success means someone can:

Register

↓

Create profile

↓

Find artist

↓

Book

↓

Pay

↓

Receive confirmation

Nothing else matters more than completing this journey.

DAY 31–90 — Validate

Targets:

- 50 artists
- 10 studios

- 200 clients
- 100 completed bookings

Every founder should personally interview users.

DAY 91–180 — Product-Market Fit

Questions to answer:

- Do users return?
- Will they pay?
- Will they recommend it?
- Can acquisition scale?
- Is support manageable?

If "no" to several of these, improve the product before expanding.

DAY 181–365 — Scale

Introduce carefully:

- Subscription plans
- Analytics
- AI assistant
- Marketplace pilots

Build only what users are asking for and what supports your business goals.

YEAR 2

Focus on:

- Operational excellence
 - Regional expansion
 - Team growth
 - Enterprise opportunities
 - Strong financial controls
-

YEAR 3

Possible milestones:

- Regional presence
 - Mature SaaS platform
 - Marketplace growth
 - Strategic partnerships
 - Larger funding round, if appropriate
-

CEO Dashboard

Every Monday morning, review:

Metric	Why it matters
Cash runway	Survival
Weekly Active Users	Engagement
Successful bookings	Core value delivered
Monthly Recurring Revenue	Predictability
Churn	Product quality
Customer support backlog	Operational health
Deployment frequency	Engineering effectiveness

The "Never Do" List

Avoid these common mistakes:

- Building features without user validation.
 - Expanding into multiple countries before the home market is working.
 - Hiring faster than revenue supports.
 - Ignoring technical debt.
 - Making pricing overly complicated.
-

The Founder Contract

Promise yourself:

- I will talk to customers every week.
 - I will review metrics every week.
 - I will ship improvements regularly.
 - I will change direction when evidence requires it.
 - I will not confuse planning with progress.
-

What Comes After the 1000-Day Plan?

Nothing.

That's intentional.

Because after this point, the company should be guided by:

- Customer feedback.
- Financial performance.
- Team capability.
- Market opportunities.

Not by another static document.

My Suggestion

You've effectively asked me to continue until there's nothing left to add. I think we've reached that point.

The next value I can create isn't another chapter—it's becoming your implementation partner.

From here, we can work through one deliverable at a time:

1. Build the **database schema**.
2. Build the **Xano backend**.
3. Build the **AppGyver application**.
4. Implement the **booking engine**.
5. Integrate **payments**.
6. Prepare the **investor deck**.
7. Launch the **private beta**.

That's where Leish.my stops being a vision and becomes a product.

LEISH.MY OPERATING MANUAL

v1.0

I'll continue—but this time with something that founders of successful startups often wish they had from day one.

Instead of another plan, here's the **Leish.my Operating Manual**: a practical set of principles and operating practices that guide decisions as the company grows.

LEISH.MY OPERATING MANUAL v1.0

1. Decision-Making Framework

Every proposal must answer these five questions:

Question	Pass Criteria
Does it solve a real customer problem?	Validated through interviews or usage data
Does it support our business goals?	Clear connection to revenue, retention, or efficiency
Can we measure success?	Defined KPIs before development starts
Is it technically feasible?	Estimated effort and risks documented
What is the opportunity cost?	What won't be built if we do this?

2. Product Prioritization Matrix

Score every feature from 1–5 in each category:

Criterion	Weight
Customer Value	30%
Revenue Impact	25%
Strategic Importance	20%
Engineering Effort (inverse)	15%
Operational Complexity (inverse)	10%

Prioritize features with the highest weighted score.

3. Release Policy

Every release should include:

- New features
- Bug fixes
- Performance improvements
- Monitoring updates
- Documentation updates

No release without rollback capability.

4. Customer Feedback Loop

Every month:

1. Interview active users.
 2. Interview users who stopped using the platform.
 3. Review support tickets.
 4. Analyze booking funnel metrics.
 5. Update the product backlog.
-

5. Risk Management

Maintain a live risk register.

Categories:

- Product
- Technology
- Security
- Financial
- Legal
- Operational
- Reputation

Review quarterly.

6. Hiring Principles

Before hiring, ask:

- Can this process be automated?
- Can an existing team member be trained?
- Is the workload recurring?

Hire when the answer justifies a long-term role.

7. Financial Discipline

Every month:

- Compare actuals vs. budget.
- Review cash runway.
- Monitor MRR growth.
- Review acquisition costs.
- Review gross margins.

Adjust spending based on evidence.

8. Product Health Checklist

Track:

- Crash rate
- App performance
- Booking success rate
- Payment success rate
- User satisfaction
- Support response times

These are operational health indicators, not just technical metrics.

9. Quarterly Planning Process

At the start of each quarter:

- Review previous KPIs.
- Reprioritize roadmap.
- Allocate engineering capacity.
- Update financial forecast.
- Communicate objectives to the team.

10. Continuous Improvement

After every major milestone:

- What did we achieve?
- What surprised us?
- What should we stop doing?
- What should we double down on?
- What experiments should we run next?

Document the answers.

The Founder Dashboard

Every Friday afternoon, review just these 10 metrics:

Metric	Target Trend
Weekly Active Users	↑
New Artists	↑
Active Studios	↑
Successful Bookings	↑
Booking Conversion	↑
MRR	↑
Churn	↓
CAC	↓ or stable
NPS	↑
Cash Runway	≥12 months preferred

Final Thought

At this stage, the greatest competitive advantage won't come from having a thicker strategy document.

It will come from:

- Shipping consistently.
- Listening to customers.
- Measuring outcomes.
- Making disciplined decisions.
- Improving every week.

Those habits compound over time and are much harder for competitors to copy than features.

If we continue from here

I would no longer produce "chapters." Instead, I would help you build the company in real time:

- Sprint planning
- Database design
- Backend implementation
- Frontend implementation
- Testing
- Deployment
- User feedback analysis
- Financial updates

That's the point where Leish.my transitions from a startup concept into an operating business.

LEISH.MY KNOWLEDGE SYSTEM (LKS)

You've genuinely reached the end of the planning universe.

So instead of inventing "Chapter 31", I'm going to give you something that almost no startup has—but every mature company eventually creates.

LEISH.MY KNOWLEDGE SYSTEM (LKS)

This is the "brain" of the company.

Why This Matters

Companies fail because knowledge lives in people's heads.

When someone leaves:

- Processes disappear.
- Decisions are forgotten.
- Context is lost.

The solution is a structured knowledge system.

The Knowledge Pyramid

Vision

Everything the company learns should end up here.

Documentation Standards

Every document should contain:

- Purpose
- Owner
- Version
- Last updated
- Dependencies
- Approval status

That makes documentation maintainable instead of becoming stale.

Decision Log

Maintain a single decision register.

Date	Decision	Reason	Impact
2026-08-01	Use Xano backend	Faster MVP	Reduced backend development time
2026-08-15	Focus on makeup artists first	Narrow market	Clearer positioning

Review it before making major architectural or business changes.

Experiment Log

Every experiment should record:

- Hypothesis
- Success metric
- Duration
- Result
- Lessons learned
- Next action

This prevents repeating failed experiments.

Customer Knowledge Base

Capture recurring customer insights:

- Common pain points
- Frequently requested features
- Typical onboarding questions
- Reasons for churn
- Reasons for referrals

Over time, this becomes one of your most valuable assets.

Engineering Knowledge

Document:

- System architecture
- API conventions
- Coding standards
- Deployment process
- Incident response
- Monitoring dashboards

This shortens onboarding time for new engineers.

Business Intelligence

Every month, archive:

- Revenue
- MRR
- GMV
- Customer growth
- Marketing performance
- Product adoption
- Retention
- Churn

You'll build a historical record that supports better forecasting.

AI Knowledge Base

As you add AI features, maintain:

- Prompt library
- Prompt versions
- Model performance
- Cost per request
- Hallucination reports
- User satisfaction

Treat prompts like production code.

Annual Company Review

Once a year, answer:

1. What assumptions were wrong?
2. What surprised us?
3. Which decisions created the most value?
4. Which initiatives failed?
5. What should we stop doing?
6. What should we invest in next year?

Keep these reviews. They become institutional memory.

The Real Endgame

If Leish.my succeeds, your most valuable assets may not just be:

- The app
- The code
- The revenue

They may also include:

- Your customer data (handled responsibly and in compliance with privacy laws).
- Your operational know-how.
- Your repeatable processes.
- Your product insights.
- Your brand and reputation.
- Your team's ability to execute.

Those assets compound over time.

The Final Lesson

The companies that last aren't the ones with the biggest plans.

They're the ones that:

- Learn faster than competitors.
- Document what they learn.
- Turn knowledge into repeatable systems.
- Continuously improve.

That's the real "next" after strategy, finance, product, and engineering: **building a learning organization**.

At this point, I believe we've reached a complete strategic framework. From here, every future conversation should produce a concrete asset—a schema, API, screen, sprint, financial update, or customer insight—that feeds this knowledge system and moves Leish.my forward.

LEISH.MY BOARD MANUAL

I think this is the right place to stop the "next" chain and give you something more valuable.

Over the course of this conversation, we've effectively outlined the responsibilities of:

- CEO
- COO
- CFO
- CPO
- CTO
- CMO

What's missing is the **board of directors' perspective**—the questions that force leadership to stay honest.

LEISH.MY BOARD MANUAL

The Board's Job

The board should not decide:

- Button colors
- Features
- Marketing copy
- Sprint tasks

The board should decide:

- Strategy
 - Capital allocation
 - Risk
 - Leadership
 - Long-term direction
-

Monthly Board Meeting Agenda

1. CEO Report (15 minutes)

Cover:

- Major wins
- Major risks

- Key decisions needed
 - Top priorities for next month
-

2. Product Review

Ask:

- Did we ship what we committed?
 - Are customers using it?
 - What evidence supports the roadmap?
-

3. Customer Review

Discuss:

- Net Promoter Score (NPS)
 - Customer interviews
 - Churn reasons
 - Feature requests
-

4. Financial Review

Focus on:

Metric	Question
MRR	Growing?
Gross Margin	Healthy?
Burn Rate	Sustainable?
Cash Runway	Enough?
CAC	Improving?
LTV	Increasing?

5. Technology Review

Questions:

- Platform uptime?
 - Security incidents?
 - Deployment frequency?
 - Technical debt?
 - Performance bottlenecks?
-

6. Growth Review

Evaluate:

- User acquisition
 - Activation
 - Retention
 - Referrals
 - Partnerships
-

7. Risk Review

Top five risks should always be visible.

Examples:

- Security
- Cash runway
- Slow adoption
- Competition
- Regulatory changes

Each risk needs:

- Owner
 - Likelihood
 - Impact
 - Mitigation plan
-

Board Scorecard

Limit reporting to a concise set of metrics:

Product

- Monthly Active Users
- Booking completion rate

Commercial

- MRR
- GMV
- Paying customers

Financial

- Cash runway
- Burn rate

Customer

- Churn
- NPS

Technology

- Uptime
 - Deployment frequency
-

Annual Strategy Retreat

Once a year, ask five questions:

1. Are we solving the right problem?
 2. Are we serving the right customers?
 3. Is our business model still working?
 4. What should we stop doing?
 5. What new opportunity deserves investment?
-

A Principle Worth Keeping

As Leish.my grows, the hardest decisions won't be about technology.

They'll be about **what not to build**.

Saying **no** to distractions is often more valuable than saying **yes** to every opportunity.

Where We Really Are

If we look at everything we've produced together, you've effectively created the outline for a startup operating system.

The next leap in value won't come from another planning document. It will come from building the first working version, measuring real customer behavior, and letting evidence reshape the plan.

That's how enduring companies evolve: not by having a perfect blueprint, but by combining a strong foundation with disciplined execution and continuous learning.

LEISH.MY — MASTER EXECUTION CANVAS (MEC)

I'm going to do something different, because continuing to generate "next" chapters would no longer be the best use of your time.

If I were joining Leish.my as a co-founder today, this is the document I would spend the next 6 months executing.

LEISH.MY — MASTER EXECUTION CANVAS (MEC)

This becomes the **single page** that the leadership team reviews every Monday.

Become the default operating platform for independent beauty professionals in Malaysia.

1. Customer

Primary

- Independent Makeup Artists (MUA)

Secondary

- Hair Stylists
- Nail Artists

Later

- Studios
- Beauty Clinics
- Freelance Photographers
- Bridal Vendors

Success criterion: Become indispensable to one segment before expanding.

2. Product

Current objective:

Make booking effortless.

Everything else is secondary.

MVP includes:

- Profile
- Portfolio
- Services
- Availability
- Booking
- Payment
- Confirmation

Nothing more.

3. Growth

Acquire users through:

- Referrals
- Communities
- Partnerships
- Organic content

Delay heavy paid advertising until retention is healthy.

4. Revenue

Priority order:

1. Subscription
2. Booking commission
3. Premium visibility
4. AI tools

- 5. Marketplace
 - 6. Enterprise
-

5. Technology

Architecture goals:

- Reliable
- Observable
- Secure
- Scalable
- API-first

Don't optimize for millions of users before serving hundreds well.

6. Operations

Every issue should have:

- Owner
- Due date
- Success metric
- Status

Avoid orphaned work.

7. Finance

Monthly review:

- Revenue
- Expenses
- Cash runway
- Forecast accuracy

Treat the forecast as a living document.

8. Team

Early hires should solve bottlenecks, not add hierarchy.

Focus on:

- Product
 - Engineering
 - Customer Success
-

9. Risks

Top recurring questions:

- Are users returning?
 - Are artists earning more?
 - Is onboarding too difficult?
 - Is support keeping up?
 - Is the roadmap too ambitious?
-

10. Weekly Questions

Every Monday morning, answer:

1. What did we learn last week?
 2. What will we ship this week?
 3. What's blocking progress?
 4. Which metric matters most right now?
 5. What should we stop doing?
-

The Rule I'd Put on the Office Wall

If it doesn't help customers book more, earn more, or save time, it waits.

That single sentence is enough to reject dozens of unnecessary features.

The Last Piece of Advice

You've asked for "next" many times because you wanted to reach the end of the roadmap.

I think we have.

The roadmap is no longer missing chapters—it needs **execution**.

If I stay involved from here, I wouldn't write more strategic documents. I'd work like a real member of the founding team:

- Design the database.
- Review the architecture.
- Write the API contracts.
- Prioritize the backlog.
- Review sprint plans.
- Analyze user feedback.
- Update the financial model with actual data.
- Prepare for fundraising when the metrics justify it.

That's where Leish.my will gain the most value from this point forward.
